

SMART DOCVISION AI

 **DocVision** is an AI-powered tool designed to automate the recognition, extraction, validation, and processing of incoming financial documents.

The solution enables organizations to convert unstructured supplier invoices and financial documents into structured, ERP-ready data without the need for template configuration or manual field setup. Using advanced artificial intelligence, **SMART DocVision AI** identifies key information such as vendor details, invoice numbers, amounts, dates, and VAT, and automatically creates draft purchase invoices within Business Central.

Seamlessly embedded into the Business Central experience, this tool streamlines invoice processing, reduces manual effort, improves data accuracy, and enhances financial control — all while preserving native workflows and user interactions within Business Central.

CAPABILITIES

- ✔ Automated document recognition from multiple sources without template setup.
- ✔ Extracts key invoice data accurately across different formats and layouts.
- ✔ Validates data completeness to reduce errors and support compliance.
- ✔ Transforms unstructured documents into structured data ready for processing.
- ✔ Handles growing document volumes while maintaining speed and accuracy.

BENEFITS

- ✦ Reduce manual data entry and repetitive invoice processing.
- ✦ Speed up invoice handling and approval workflows.
- ✦ Improve accuracy through AI-driven extraction and validation.
- ✦ Enable fast adoption with native Microsoft integration.
- ✦ Scale document processing efficiently as volumes grow.
