Software Solutions to Make Your Job Smarter

www.smartycubes.com

State of IT in business and business challenges

- Businesses invest in information technologies to become more agile.
- In this context, solutions such as ERP, CRM, MES, BPM are used.
- The aim here is to increase efficiency and make the right strategic decisions for the company by both digitalization and accurate reporting.

Problems

Data in systems (ERP, CRM, MES, BPM, etc.) are usually kept in separate databases and can be difficult to consolidate.

Therefore, consolidated, real-time reporting is not possible.

Errors may occur when reporting is done manually or when data is combined.

Since the systems are not integrated, visual reporting is not possible.

Problems that cause the losses

1

Data worth its weight in gold cannot be utilized.

2

Time losses for reporting

3

Data-related errors are made when making strategic decisions.

4

Due to incomplete reporting money and cost losses occur.

5

Not enough predictions cannot be made.

**Data-driven strategies that takes
your business to the top**

Get the power and information you need to manage your company with SmartyCubes Business Intelligence Solutions

Instant sales and get financial reports

SmartyCubes helps you analyze your business' financial data. It allows you to optimize such as income-expense analysis, cash flow management and cost financial processes.
