

Email as a Service

Removing the burden of email, empowering your business.

SMX's Email as a Service is a tailored email management solution for email service providers. Our regional hosting, government-grade security, and 24/7 monitoring ensure a secure and compliant email service, freeing you to focus on your core business.

What is Email as a Service?

The modern threat landscape requires a comprehensive approach to email security. Email providers face increasing pressure to deliver exceptional user experiences while protecting sensitive data and maintaining compliance. Our holistic approach, combining robust hosting, advanced security, and proactive monitoring, empowers you to safeguard your email environment and focus on your core business.

Email as a Service, your comprehensive email solution

SMX offers a three-module approach to address the evolving challenges faced by service providers. By combining the power of SMX Host, Secure, and Monitor, we deliver a seamless, reliable, and secure email experience for both service providers and their end-users.

Robust, enterprise-grade email security

With robust hosting, enterprise-grade security, and 24/7 monitoring, SMX enables providers to deliver seamless, reliable email services - eliminating the operational complexity and costs of in-house management.

Focus on your core business: our email solution does the rest

Whether you're an ISP, Telco, or MSP, our secure email solution lets you retain customer ownership and loyalty while freeing your team to focus on core business priorities. Partnering with SMX means we handle the complexity of email management end-to-end, so you can drive your business forward.

Key benefits:

Reduce operational costs and complexity by outsourcing email infrastructure management

Enhance security posture with comprehensive threat protection and continuous monitoring

Ensure compliance with regional data regulations through regional hosting options

Scale efficiently while ensuring reliable service delivery

Optimise internal resources to focus on core business growth

Decrease support calls with improved end-user experience, proactive monitoring and clean inboxes

Our comprehensive email infrastructure - Host, Secure, Monitor.

Our integrated three-module solution empowers Telcos and ISPs to overcome the complexities of email infrastructure management:

SMX Host -

Reliable, compliant email hosting

Designed for organisations prioritising data sovereignty, SMX Host delivers seamless access across devices, disaster recovery, and regional data storage, ensuring both security and reliability.

Reliable and compliant hosting:

- 🔒 Deliver exceptional email services that meet local data residency requirements.

Scalable infrastructure:

- 🔒 Reduce operational overhead and ensure seamless access for your customers.

SMX Secure -

Telco-grade security and protection for evolving threats

SMX Secure is a government-grade security solution that proactively protects against phishing, malware, and Business Email Compromise. Designed for APAC service providers, it addresses the growing complexity of cyber threats with proactive, intelligent security measures.

Government-grade security:

- 🔒 Safeguard your reputation with advanced security measures.

AI-powered threat detection:

- 🔒 Proactively identify and mitigate threats.

SMX Monitor -

24/7 proactive monitoring and rapid incident response

SMX Monitor provides 24/7 monitoring, real-time threat detection, and proactive incident response, allowing service providers to reduce support demands and maintain high standards of security and reliability for their users.

24/7 security monitoring:

- 🔒 Ensure uninterrupted service delivery with round-the-clock monitoring.

Rapid incident response:

- 🔒 Minimise downtime and protect your customers' data.
