

Cloud Migration Services

Go all-in on the cloud, without the risk

We bring stability and predictability when migrating applications and workloads to the cloud. That's why thousands of customers trust us to deliver secure, scalable, and effective cloud migrations on time and within budget.

Deliver on the three most important outcomes.

- ✓ **Ensure technology delivers on business goals**
Make cloud investments that help you solve business challenges and create better user experiences, for your people and customers.
- ✓ **Grow value faster**
Avoid common missteps with specialized guidance and support from our certified cloud engineers.
- ✓ **Protect your investments:**
Ensure a secure, stable and manageable environment with a personalized migration process backed by testing, real data and reference architectures from leading cloud providers.

The Softchoice Cloud Migration Module is a group of personalized service offerings designed to solve the most common IT challenges of cloud migration.

Plan

Assesses business and on-premises infrastructure requirements to create a migration plan that aligns cloud usage, delivery, and implementation with business expectations.

Build & migrate

Implements the optimal migration strategy tailored to the exact needs of your business, from low-cost migrations and extending on-premises environments to hybrid cloud or deploying future-ready platforms.

Operate

Analyzes cloud architecture against best practices, resulting in recommendations to establish secure, high performing and cost-efficient cloud operations.

Each element of the Softchoice Cloud Migration Module is personalized to make cloud transformation happen on time, on budget and on vision.

Plan

Application Rationalization Assess applications, data and infrastructure to identify business-critical workloads along with a personalized migration strategy that balances time, cost and performance.

Migration Planning Identifies resource requirements and workload dependencies to design a migration journey roadmap that delivers on the expectations of stakeholders.

Build and Migrate

Lift and Shift Migrate existing applications from on-premises directly to cloud using high-speed, high-volume, data-driven migration techniques to accelerate projects with ease and low cost.

VMware Cloud Services Seamlessly extend or migrate existing VMware-based workloads to cloud with familiar tools, skills, and operating models.

Re-platforming Retool and migrate on-premises applications to cloud without making major architectural changes for an incremental approach to modernization.

Application Modernization Rebuild components or the entire application architecture to deploy future ready platforms that improve user experiences, increase developer productivity and adapt to changing market demands.

Migration Landing Zone Build cost-effective cloud foundations with a set of baseline governance, security and operational policies that allow environments to scale beyond the migrated workloads.

Advanced Landing Zone Build highly personalized cloud foundations that meet complex technical and business needs such as extending on premises networks to cloud and deploying advanced security and compliance controls.

Operate

Workload Optimization Analyze cloud environments to understand performance issues and identify opportunities to reduce resource waste and increase return on invested consumption.

Cloud. Done right.
