

Microsoft 365 Copilot readiness review

Optimize your enterprise for AI.

As companies advance in their AI journey, Microsoft 365 Copilot allows customers to utilize Artificial Intelligence and Generative AI capabilities to assist with common tasks such as writing influential email, summarizing customer interactions, and creating more efficiently impactful presentations with the power of M365 Copilot.

Organizations are looking to implement AI assisted Copilot functions for document task automation within day-to-day activities.

As M365 Copilot will utilize corporate data to assist with everyday activities, those workflows could lead to data leakage if file permissions and governance recommendations are not followed.

Customer personas and use cases play a key role in M365 deployment and readiness as this exercise identifies key groups that will take full advantage of M365 Copilot

M365 Copilot takes A.I. integration a step further by allowing customers to interact with M365 apps using natural language. Copilot can analyze information not only in the current document, but also other relevant documents stored in your Microsoft 365 tenant. Softchoice is looking to build awareness of Copilot functionality and where the capability fits within the customers' environment.

Softchoice offers the Microsoft 365 Readiness Assessment that provides customers with the current state of the environment, and a scoring model that details where the customer stands in their Copilot deployment journey. Let Softchoice review your current security and governance utilization and provide recommendations on how to advance the Copilot story. This assessment helps you identify insecurities within your M365 data infrastructure, provide an overall scoring for M365 readiness, standardize threat management, and exposure to major security threats. Our specialists will then recommend changes for the implementation of requirements for a future M365.

10%

"Most people use no more than ten percent of what PowerPoint can do. Copilot unlocks the other ninety percent."

Modules	What is it?	What you gain
Current state	Provides the current capabilities of M365 Copilot and where customers can utilize core capabilities efficiently within the environment	<ul style="list-style-type: none">✓ Licensing landscape✓ Overview of Copilot Capabilities✓ Security and governance recommendations
User personas breakdown	Reviews the current user population and make recommendations as to which users can fully take advantage of M365 Copilot capabilities	<ul style="list-style-type: none">✓ A breakdown of the current customers user personas and recommendations for user enablement
M365 Copilot readiness	Overviews high level requirements for M365 Copilot and provides customers with a readiness score	<ul style="list-style-type: none">✓ Line of sight to Copilot readiness and recommendations for next steps to prepare the environment to enable M365 Copilot
Recommendations & next steps	Builds a recommended approach to get your environment ready for M365 Copilot through remediation and process enablement	<ul style="list-style-type: none">✓ A clear roadmap of recommended actions

Gain enhanced insight into Copilot readiness

- Overview of M365 Copilot Components
- Identify recommended configuration.
- Determine use cases and personas for usage.
- Providing capabilities through Responsible AI Practices
- Overall Copilot readiness score with recommendations and next steps
- User recommendations for proper adoption of Copilot

Get a comprehensive view of your environment, and requirements to properly deploy and adopt M365 Copilot. Contact your Softchoice Account Manager for more details.
