Zero trust workplace solution

Secure collaboration

Solution for organizations wanting to improve their overall security posture by implementing key security features for protecting user identity, devices, and data.

Customer challenges

Endpoint Security

- Endpoint protection policies delivered through a mobile device management tool assure all devices are secure and updated properly

- Ensuring devices ae properly patched and updated while remote can be a challenge to companies

Data and Compliance

- Deployment of a full compliance strategy require participation of multiple departments such as IT, Legal, ELT, and Department

- Management. This requires coordination of a centralized resource to ensure all requirements are met.

- Review and management of access to restricted data and performing data access investigations can be an extensive process on a small IT department.

Identity and Access Management

- Customers have issues with the ability to identify risky users/logins and attempts from bad actors to comprise the identity infrastructure

- Man in the Middle and Golden Ticket attacks can provide hackers with backdoor access into the customers domain infrastructure

Offering highlights

- Reduce cost, complexities, and management overhead by consolidating multiple security solutions.

- Learn how to utilize integrated security features that protect your users identity, company data, and devices using the Zero Trust Strategy

- Implement a best in class security solution by developing a design and plan based on best practices.
