Azure is the right choice for your SQL Server Workloads, but a migration can be a challenge

When you want to migrate your SQL Server workloads to Azure, you'll face some challenges while trying to identify the right service for your needs, when defining the dependencies between the different applications and during the planning phase. We're here to help you!

CHALLENGES

Identifying the right Azure service for your needs, its correct size to avoid wasting money, and the ideal configuration to secure it can be challenging.

Then, you need to be sure to move all the related applications, in the least impacting way possible.

IDEAL SOLUTION

An in-depth assessment is the right choice to discover your infrastructure's hidden spots and permits you to plan a successful migration.

DESIRED OUTCOMES

Thanks to our long experience, we can drive you through the assessment phase, knowing the right questions to avoid leaving something behind.

Then, we'll design the right solution for you and plan the migration phase according to your needs.

SQL Server Lift, Optimize & Shift: The assessment

We help you identifying the right Azure service for your SQL Server workload, and to determine the perimeter and the right steps for your migration.

1

ASSESS

We analyze all your configurations and the dependencies between applications

2

DESIGN

Depending on your business needs and your technical constraints, we design the right solution for you

3

PLAN

We plan for a smooth transition between your current environment and your Azure landing zone

SoftJam SQL Server Lift, Optimize & Shift + Microsoft Azure

Microsoft Azure is the right public cloud provider for your SQL Server workloads.

We bring you all our experience to make your cloud journey as smooth as possible.

IMPROVE WITH EASE

Leverage Azure features for running a modern SQL Server environment while containing the migration effort

SUCCESS

A good planning phase means less stress during the migration and better results

SECURITY IN MIND

A performant target environment is only a part of the solution. You need to be sure that your data platform is compliant to the highest security standards

Assess your SQL workloads for a successful migration
