

Data Center Contract Expiration

The expiration of datacenter leases can be seen as the first stage in starting the cloud migration process.

Issues and Resolution

Physical datacenter ownership and management can be costly in terms of both money and time.

Expiration of datacenter contracts can be a turning point for cloud migration since it can offer advantages almost immediately in the form of cost savings, improved performance, and easier administration.

By moving your datacenter operations to the cloud, you may avoid paying recurrent contract fees and take advantage of the built-in scalability and other important management capabilities that greatly simplify the management of your datacenter.

Elimination of Recurring Expense

Customer Problem

The imminent expiration of the DC contract and the replication of the DC-DR with more than 100+ operating workloads across geos were giving the chief executives of one of the top logistics organizations restless nights.

Solution Offered

Utilizing a variety of Azure technologies, Noventiq offered a migration option that allowed customers to move all their workloads to Azure while receiving full internal support from Noventiq 24x7 Operations Team

Customer Value

The customer benefited from this since Noventiq eliminated all On-Prem Dependencies, enhanced workload performance by 40%, and improved and efficient financial modelling.

Noventiq Customer's Approach

Ensuring Business Continuity

Cloud assure business-critical workload security and resilience to prevent day-to-day operations from being disrupted by problems.

Issues and Resolution

Robust Applications and Processes

Noventiq Customer's Approach

We reduce the number of disruptions and more easily manage operations by transferring critical business apps to the cloud, which is frequently one of the top worries.

We can make sure that applications are not only robust but also able to scale up or down to meet performance requirements by utilizing native disaster recovery and high availability services.

Azure offers solutions for replication of critical workloads across many regions to enhance their uptime, as well as built-in recovery methods to significantly decrease, if not completely remove, the danger of losing critical apps or data.

Customer Problem

Due to high availability issues for 300+ workloads, the consolidation of 3 ongoing DCs, and having separate billing for each entity, executives of one of the top music organizations were experiencing restless nights.

Solution Offered

Utilizing the 7Rs and CAF framework, Noventiq had offered a migration service to move all of the workloads to Azure, also prepared and carried out the customer's business continuity plan.

Customer Value

The customer had benefited from this since Noventiq had reduced the cost of the license through excellent planning and execution, effective customer service, and improved infrastructure management utilizing RBAC modelling.

Defense Against Cyber Security Threats

Cloud assure business-critical workload security and resilience to prevent day-to-day operations from being disrupted by problems.

Issues and Resolution

Cloud Security Solutions

Noventiq Customer's Approach

Many organizations feel increasingly insecure as a result of traditional IT solutions being unable to keep up with the danger environment of modern cyberattacks.

With a range of physical, technical, and operational controls, the cloud is secured, enabling businesses to take precautions to guarantee that their apps and data are safeguarded, backed up, and compliant.

The cloud has integrated security features that give thorough defense against cutting-edge attacks.

Customer Problem

One of the top firms for investment banking, wealth management, and securities brokerage was looking to get rid of its on-premise vulnerable legacy infrastructure while still maintaining business continuity.

Solution Offered

Noventiq had proposed a Digital Transformation Offering in order to shift their workloads to Azure, consolidate their TWO DCs, build up Azure VDI for more than 100 users, and provide them with our Cloud Security Operations Services for DC-DR environments.

Customer Value

The customer had benefited from this since Noventiq had centralized policy and IAM administration in addition to streamlining the entire Security operations, which had resulted in a staggering 60% decrease in cost.

Improving the Cash Flows

The chance to do away with significant up-front expenditures in infrastructure assets.

Issues and Resolution

Shifting from CAPEX to OPEX Financial Model

Noventiq Customer's Approach

Since there are frequently investments set aside for infrastructure, maintaining a physical datacenter might present substantial cash flow difficulties.

Since you are no longer responsible for covering the costs of a physical datacenter and the gear and software that go along with it. Instead, with cloud computing, you only pay for the resources you really use and may scale up or down as necessary.

This gives an organization's financial flow additional flexibility.

Customer Problem

One of the Fortune 500 companies and a public sector undertaking were aiming to merge the susceptible apps that are running across several regions, which would increase operating expenses overall.

Solution Offered

The transfer of all workloads to Azure, establishment of the correct Landing Zone, IOT Data Streams, and migration of PowerBI reports to the operational tenant were all included in Noventiq's Digital Transformation Offering.

Customer Value

Due to Noventiq's streamlining of all operational procedures, the customer benefited from a huge cost savings of 70% as well as centralized policy, security, and user management.

Managing the Constrained Budgets

Finding strategies to do more with less is essential for firms right now as a result of shrinking resources and evolving business objectives.

Issues and Resolution

Noventiq Customer's Approach

Shifting from In-House Operations to Managed Service Provider Model

Since there are frequently investments set aside for infrastructure, maintaining a physical datacenter might present substantial cash flow difficulties.

Since you are no longer responsible for covering the costs of a physical datacenter and the gear and software that go along with it. Instead, with cloud computing, you only pay for the resources you really use and may scale up or down as necessary.

This gives an organization's financial flow additional flexibility.

Customer Problem

Due to the steep learning curve for new technologies, one of the top global pharmaceutical organizations was experiencing difficulties running its various tech stack on the cloud, which increased its operational costs.

Solution Offered

With cloud consultation, design, and managed services centered on the analytical platform, Noventiq has offered its Cloud Operations Offering to handle all the workloads on Azure.

Customer Value

The client had benefited from this since Noventiq had improved the efficiency of all operating procedures. The customer satisfaction score had sharply climbed from 37% to highs of 100%, and the security score had grown from 52% to 95%.

Application Innovation

By supporting both present development efforts and future technology service aspirations, innovation may add significant value to businesses.

Issues and Resolution

App Modernization

Noventiq Customer's Approach

Refactoring a program entails some design changes but does not involve significant code alterations. The application maintains code that is vital to the application's use case while utilizing IaaS and maybe PaaS capabilities from the provider.

By shifting the CODE to the cloud, it immediately increase the performance, scalability, and resilience of such apps.

With built-in DevOps for continuous innovation and Cloud Native features, increase corporate agility.

Customer Problem

One of the top software coding companies was experiencing problems with their apps' performance on the existing platform and their high operational costs.

Solution Offered

Noventiq had offered a Digital Transformation Offering to move all the workloads to Azure, and they made use of our DoSM Offering to create automated migration processes and validate the cost spent.

Customer Value

The customer had benefited from this since Noventiq had reduced operational expenses by 40% overall while also saving the cost of the license through good advice and implementation.
