# DATA SCRAPING 2-WEEK POC

WHY SHOULD YOU ORDER A DATA SCRAPING POC NOW?

- Automate the process of obtaining the data that is important and relevant to your business

- Reduce operational costs for data extraction and preparation

- Enrich existing data with additional information for advanced analytics and trend forecasting

- Eliminate manual data entry and improve data accuracy

DELIVERABLES OF THE POC

- Full functional data scraping workflow that is ready to launch

- Comprehensive documentation that can be used as a standard for the next projects

- Training provided by Microsoft Certified Trainer with detailed explanation of development process, used features and next steps

softserve

During the PoC, our experts will help you to configure web scrapping and data preparation processes to turn the extracted data into business assets. This component is similar to RPA scraping, but more robust, tolerant to changes of the data source and provides flexible capabilities.

The main goal for this PoC is to prepare data for their subsequent use in business: for predictive analytics (using Azure Machine Learning) or creating interactive reports that help to make data-driven decisions (using Power BI), etc.

KEY STEPS OF THE POC

Identify data sources for data scraping (1-2 for PoC)

Describe extracted data with key parameters

Choose data scraping technology

Configure tables to store scraping data

Configure and deploy data scraping workflow

Choose data scraping technology

Configure tables to store scraping data
