

4-WEEK ASSESSMENT & PLANNING FOR MIGRATION TO SYNAPSE

Why should you get an in-depth assessment now?

The goal of in-depth assessment and planning session is to identify the gap between company's business challenges and technical capabilities of current data ecosystem, and then create a robust fit-for-purpose data solution.

Given the high level of uncertainty on the initial stages the assessment **will reduce associated risks and ambiguity so that SoftServe can provide the optimal solution for you, provide accurate project estimation, and accelerate implementation.**

ASSESSMENT FOCUS AREAS

Success—Define acceptance criteria, validate stakeholders expectations

Complexity—Define edge cases, evaluate complexity of identified clusters and patterns (data, workloads, reports, etc.)

Risk—Define risk areas, evaluate potential impact, define mitigation approach

Automation—Evaluate efficiency of automation in specific areas: schema migration, scripts and reports migration

Optimization—Solution vision, level of required changes, possibility to perform optimization and fine tuning after migration, etc.

Acceleration—Define most effective strategy and approach based on estimated efforts for each migration scenario and taking into account scope and complexity

softserve

ABOUT THE WORKSHOP

A deep dive to migration project planning. SoftServe experts will analyze the existing system architecture, upstream and downstream dependencies, and security and privacy requirements—as well as limiting migration downtime. Deliverables include: target cloud Architecture Vision and actionable Migration Plan, covering services mapping, migration milestones, refactoring efforts, as well as duration and cost estimates.

Assessment Agenda

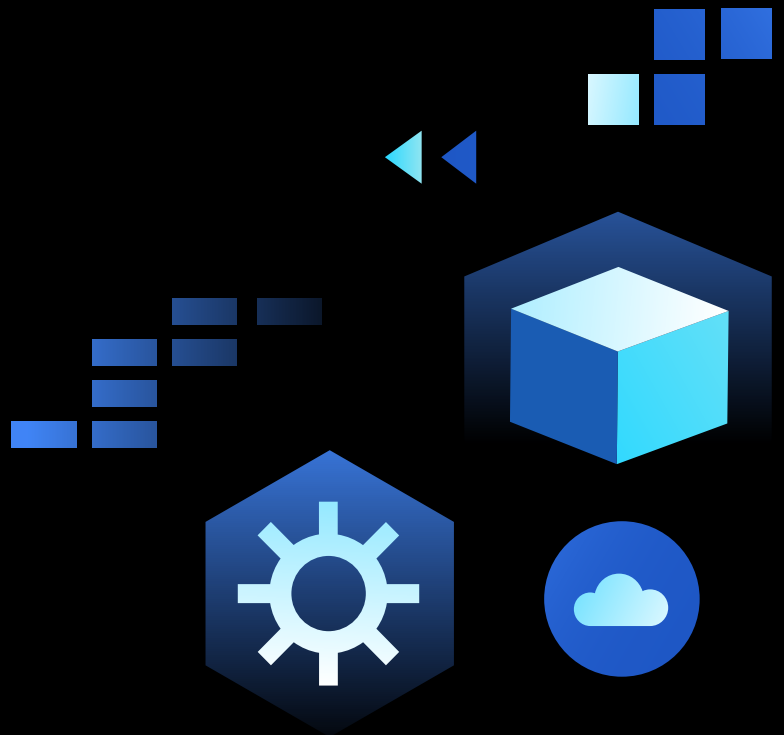

Deliberation of business needs & requirements, current challenges and pain points

Highlight potential value and benefits based on discovered gaps and areas of improvement

Define the most efficient architectural approach based on requirements, budget and expectations

Deliverables

- Tech Solution Vision: architecture design
- Migration strategy and detailed plan
- Data transfer solution vision
- Data synchronization solution vision
- Estimated budget for the next step
