# Azure Virtual Desktop Quickstart

For Nonprofit

Drive your mission forward with secure, optimised, and modern infrastructure. Enabling access to your critical applications and services – from any device.

Given the global challenges and remote collaborations, nonprofits now more than ever require secure, versatile solutions. With Azure Virtual Desktop for Nonprofit, we ensure your work has no boundaries. Offering a customisable Virtual Desktop Infrastructure (VDI); it's designed to be secure, cost-effective, and user-friendly. Your team's interactions with their tools and apps remain as seamless as using a local desktop or laptop.

What will we do?

For nonprofits striving for impact, our Azure Virtual Desktop (AVD) offering ensures you're not just equipped but empowered. We introduce you to the core principles of the Azure Virtual Desktop platform, guiding you in honing your design needs.

Subsequently, we roll out the AVD environment tailored to safeguard your mission-critical data while enabling seamless collaborations. The security and versatility of Desktop Virtualisation ensure that your team can focus on their goals, wherever they are. As we wrap up, you'll receive a comprehensive Azure Virtual Desktop High-Level Design, detailing the design decisions and environment configuration, complemented by both expert advice and implementation.

Solutions Partner

Infrastructure
Azure

Azure Virtual Desktop provides the following benefits:

User Experience

Delivers the best user experience, on every device.

- Provides the only fully-optimised Windows 10/11 and Windows Server desktop and application visualisation.

- Offers seamless integration with Microsoft 365 Apps for enterprise and Microsoft Teams.

- Azure supports over 60 regions worldwide (the most of any cloud provider), meaning that we can get a desktop close to any user's location.

Security

Improve security with built-in and integrated Microsoft security offerings.

- Includes built-in Azure security capabilities and is integrated with the security and management of Microsoft 365.

- Helps keep users, devices, and data safe with multifactor authentication and conditional access.

- Increases protection for infrastructure with configurable security tools such as Azure Security Center and Microsoft Endpoint Manager.

Scalability

Avoid capacity constraints—deploy and scale in minutes, based on business demands.

- Azure Virtual Desktop is always up to date, because Microsoft manage the infrastructure, which reduces the overall operational overhead.

- Reduces the need for hardware inventory and maintenance, freeing your IT team to focus on users, apps, and OS images.

- Quickly gets users up and running and leverages the cloud to instantly scale in response to business needs.

Cost Optimisation and Modernisation

Save by using existing licenses and paying only for what you use (with built-in scaling).

- AVD can be accessed through existing Windows and Microsoft 365 eligible licenses (you still pay for infrastructure).

- Provides consumption-based pricing down to the minute—with no up-front costs or termination fees.

- AVD offers Windows 10/11 multi-session to add more users and increase utilisation of Virtual Machines (VMs).
