# Cybersecurity Managed Services for Microsoft
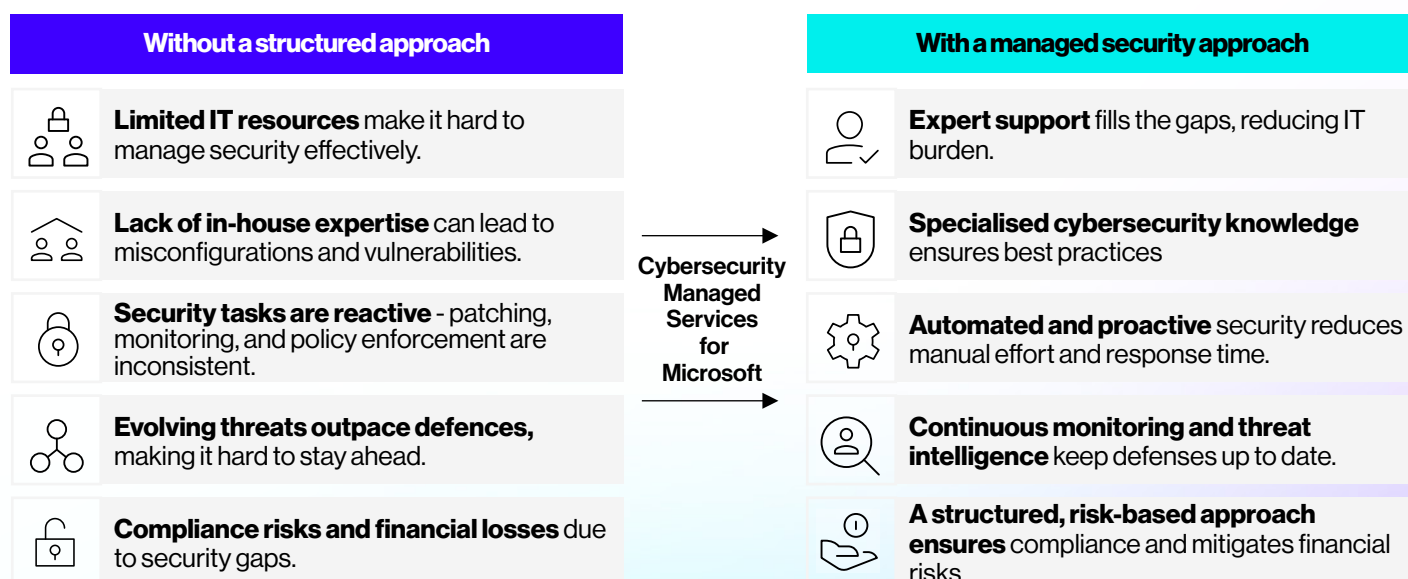

Securing your digital landscape

At SoftwareOne, security is not just about defence - it's about enabling your business to thrive securely in a dynamic digital landscape. Our Security Managed Services for Microsoft empower organisations to proactively address evolving cyber threats, ensure compliance with industry regulations, and maximize the value of their Microsoft investments.

With a comprehensive approach that aligns with your business objectives, we help you turn security from a challenge into a catalyst for growth.

Your objectives

- Strengthen employee security awareness
- Ensure consistent patch and update management
- Implement strong authentication and access controls
- Establish robust data backup and recovery practices
- Secure endpoints and devices
- Enhance application security and governance

Your journey to security

Without a structured approach	With a managed security approach
Limited IT resources make it hard to manage security effectively.	**Expert support** fills the gaps, reducing IT burden.
Lack of in-house expertise can lead to misconfigurations and vulnerabilities.	**Specialised cybersecurity knowledge** ensures best practices
Security tasks are reactive - patching, monitoring, and policy enforcement are inconsistent.	**Automated and proactive** security reduces manual effort and response time.
Evolving threats outpace defences, making it hard to stay ahead.	**Continuous monitoring and threat intelligence** keep defenses up to date.
Compliance risks and financial losses due to security gaps.	**A structured, risk-based approach ensures** compliance and mitigates financial risks.

Cybersecurity Managed Services for Microsoft

How SoftwareOne empowers you

By partnering with us, you can offload the complexity of security management while ensuring you remain protected, compliant, and resilient against threats. Our services provide expert guidance, automation, and hands-on support, helping you implement best practices efficiently without straining your internal teams.

User Awareness Training
We design and deliver ongoing employee security training, including phishing simulations and policy enforcement, to reduce human error and strengthen your security culture.

Patch and Vulnerability Management
Our team ensures operating systems and applications stay updated, automating patch deployment and monitoring compliance to prevent exploitable weaknesses.

Identity and Access Management
We implement strong authentication, access controls, and role-based permissions, helping you enforce least privilege access and prevent unauthorised entry.

Data Protection and Backup Services
We provide secure, automated backup solutions, regularly test disaster recovery processes, and help you meet compliance requirements for data security.

Endpoint and Device Security
Our experts deploy and manage advanced endpoint protection, enforce device security policies, and monitor your environment for suspicious activity.

Application Security and Governance
We assess and secure in-house applications, ensure secure configurations, and provide ongoing monitoring to detect potential vulnerabilities.
