

# Hybrid spaces of collaboration by Microsoft Teams

The world and our professional surroundings are changing faster than ever, creating more and more opportunities for companies that understand the challenges and the needs of reinventing the hiring and retention process in the new hybrid and digital work environment.

The new work culture, brought by the new generations and the post pandemic world, has enabled a new standard of social and workspaces.

Under these new spaces, we can find challenges such as:

- 1 **Less people on site** and more people in massive virtual spaces
- 2 **New media** and communications channels
- 3 **New collaboration spaces**
- 4 **Work from home**, mobile devices and offices (Hybrid work)

It is time to **innovate** and create **new collaboration spaces** that facilitate the work of your collaborators, guaranteeing:

**A consistent and optimized experience in collaborative spaces:**

By enabling a range of spaces and technological solutions where it is possible to unite different types of collaboration, allowing both participants (remote and face to face employees) to benefit from video collaboration tools.

**Sound blocking and acoustic fence:**

Introduce new functionalities that allow toy collaborators to feel safe and comfortable, no matter where they are or whom they are with. The sound blocking will allow just to hear the voice during the intervention.

**Monitoring, management and control platform:**

It will allow to have visibility of the investment in collaboration with information about the devices.

## Why SoftwareONE?

At **SoftwareONE** we understand that the processes of virtualization and hybrid work can't be conceived without understanding the environment and culture of the Company. That's why we have leveraged our strategy in a process that integrates each of these elements and allows us to deliver the most suitable implementation roadmap for your business **3 phases - 4 elements**:
