

GitHub Enterprise Cloud Data Residency Fact Sheet

- Powered by Microsoft Azure

Overview

The new GitHub Enterprise Cloud Data Residency ensures secure, region-specific data storage and processing, aligning with local regulatory requirements like the EU Data Boundary. Azure powers this SaaS solution and delivers full GitHub Enterprise Cloud functionality while maintaining compliance and data control. Also available through Microsoft CSP.

Key Features:

- **Data Residency Compliance:** Meet regional data storage requirements.
- **Azure-Powered Scalability:** Utilize Azure's global infrastructure for reliability and scalability.
- **SaaS Convenience:** Access the latest GitHub features without downtime or manual updates.
- **Enhanced Security:** Managed identities and isolated namespaces ensure secure access and control.

Why Solidify? Your trusted partner for the journey

At Solidify, we guide your organization through every step of adopting GitHub newest offering. Our tailored services ensure a smooth transition, scalability, and ongoing success with GitHub.

Your journey with us:

1. **Instance setup:** We start by configuring your instance to your specific data residency and compliance requirements.
2. **Migration of repositories and data:** With years of migration services experience, we transition your current repositories and data with minimal disruption, ensuring smooth handover from your current setup.
3. **Identity management:** We seamlessly integrate your existing enterprise identity provider (IdP) to manage identities and access, ensuring security and control through managed users.
4. **Support and training:** Depending on your needs, we offer a tiered support system and customized training for your admins and developers, all within defined SLAs as part of the **Cloud Solution Provider (CSP) program**. Our tiers ensure the right level of service for your environment:
 - **Small:**
 - i. Up to 250 repositories

- ii. Includes one GitHub Administration and GitHub Developers training sessions
 - **Medium:**
 - i. Up to 500 repositories
 - ii. Includes two GitHub Administrator and GitHub Developers training sessions
 - **Large:**
 - i. Up to 1000 repositories
 - ii. Includes three GitHub Administration and Governance sessions, GitHub Actions Session, GitHub Developers Training
 - **Enterprise:**
 - i. 1000+ repositories
 - ii. Custom Training sessions
 - iii. **Contact Sales**
5. **Next steps:** Once your instance is set up, we will work with you to explore further GitHub capabilities.
- GitHub Advanced Security (GHAS): We can assist with a **GHAS POC** and provide comprehensive **GHAS training** to boost your DevSecOps efforts.
 - GitHub Copilot: Unlock AI-powered coding with **Copilot**, offering hands-on sessions and expert guidance to get the most out of your development processes.
 - Additional training & optimization: As your environment evolves, we continue providing ongoing support and training tailored to your needs.
