Secret and Privacy Scanner

Detect secrets and GDPR data leaks with Secret and Privacy Scanner

2021-08-16

Solidify

Detect secrets and leaks instantly

Secret and Privacy Scanner is a tool that will help you and your company keep your repositories and tickets clean from confidential and sensitive data that might cause security issues and leaks or violate GDPR laws.

CHALLENGES

Secrets and other sensitive data like personal data are frequent findings in software development repositories. Scans made by security researchers find that 16% of repositories on GitHub contain some form of secrets that should not be exposed.

IDEAL SOLUTION

Scan all tickets and commits to Azure DevOps or GitHub.

Potential secrets are then compared against an Exemption list. If a potential secret is not in the exemption list the scanner will alert both the developer and the Security Officer.

DESIRED OUTCOMES

As a result of instant feedback you will get following benefits:

- Zero unwanted sensitive data

- Mitigated security risks

- Increased awareness of security & compliance

Solidify

Benefits & impacts

Safe guard your repositories and other content tools with top of the line scanners while maintaining full control.

1 Zero unwanted sensitive data

Act on secrets early and remove or change them from identified sources.

### 2 Mitigated security risks

Secret and Privacy Scanner helps you mitigate leaked passwords that are serious security threats that could inflict real harm to you and your customers.

3 Increased awareness of security & compliance

Enchance your security mindset with regular alerts on findings and potential leaks.

Solidify Secret and Privacy Scanner & Azure DevOps and GitHub
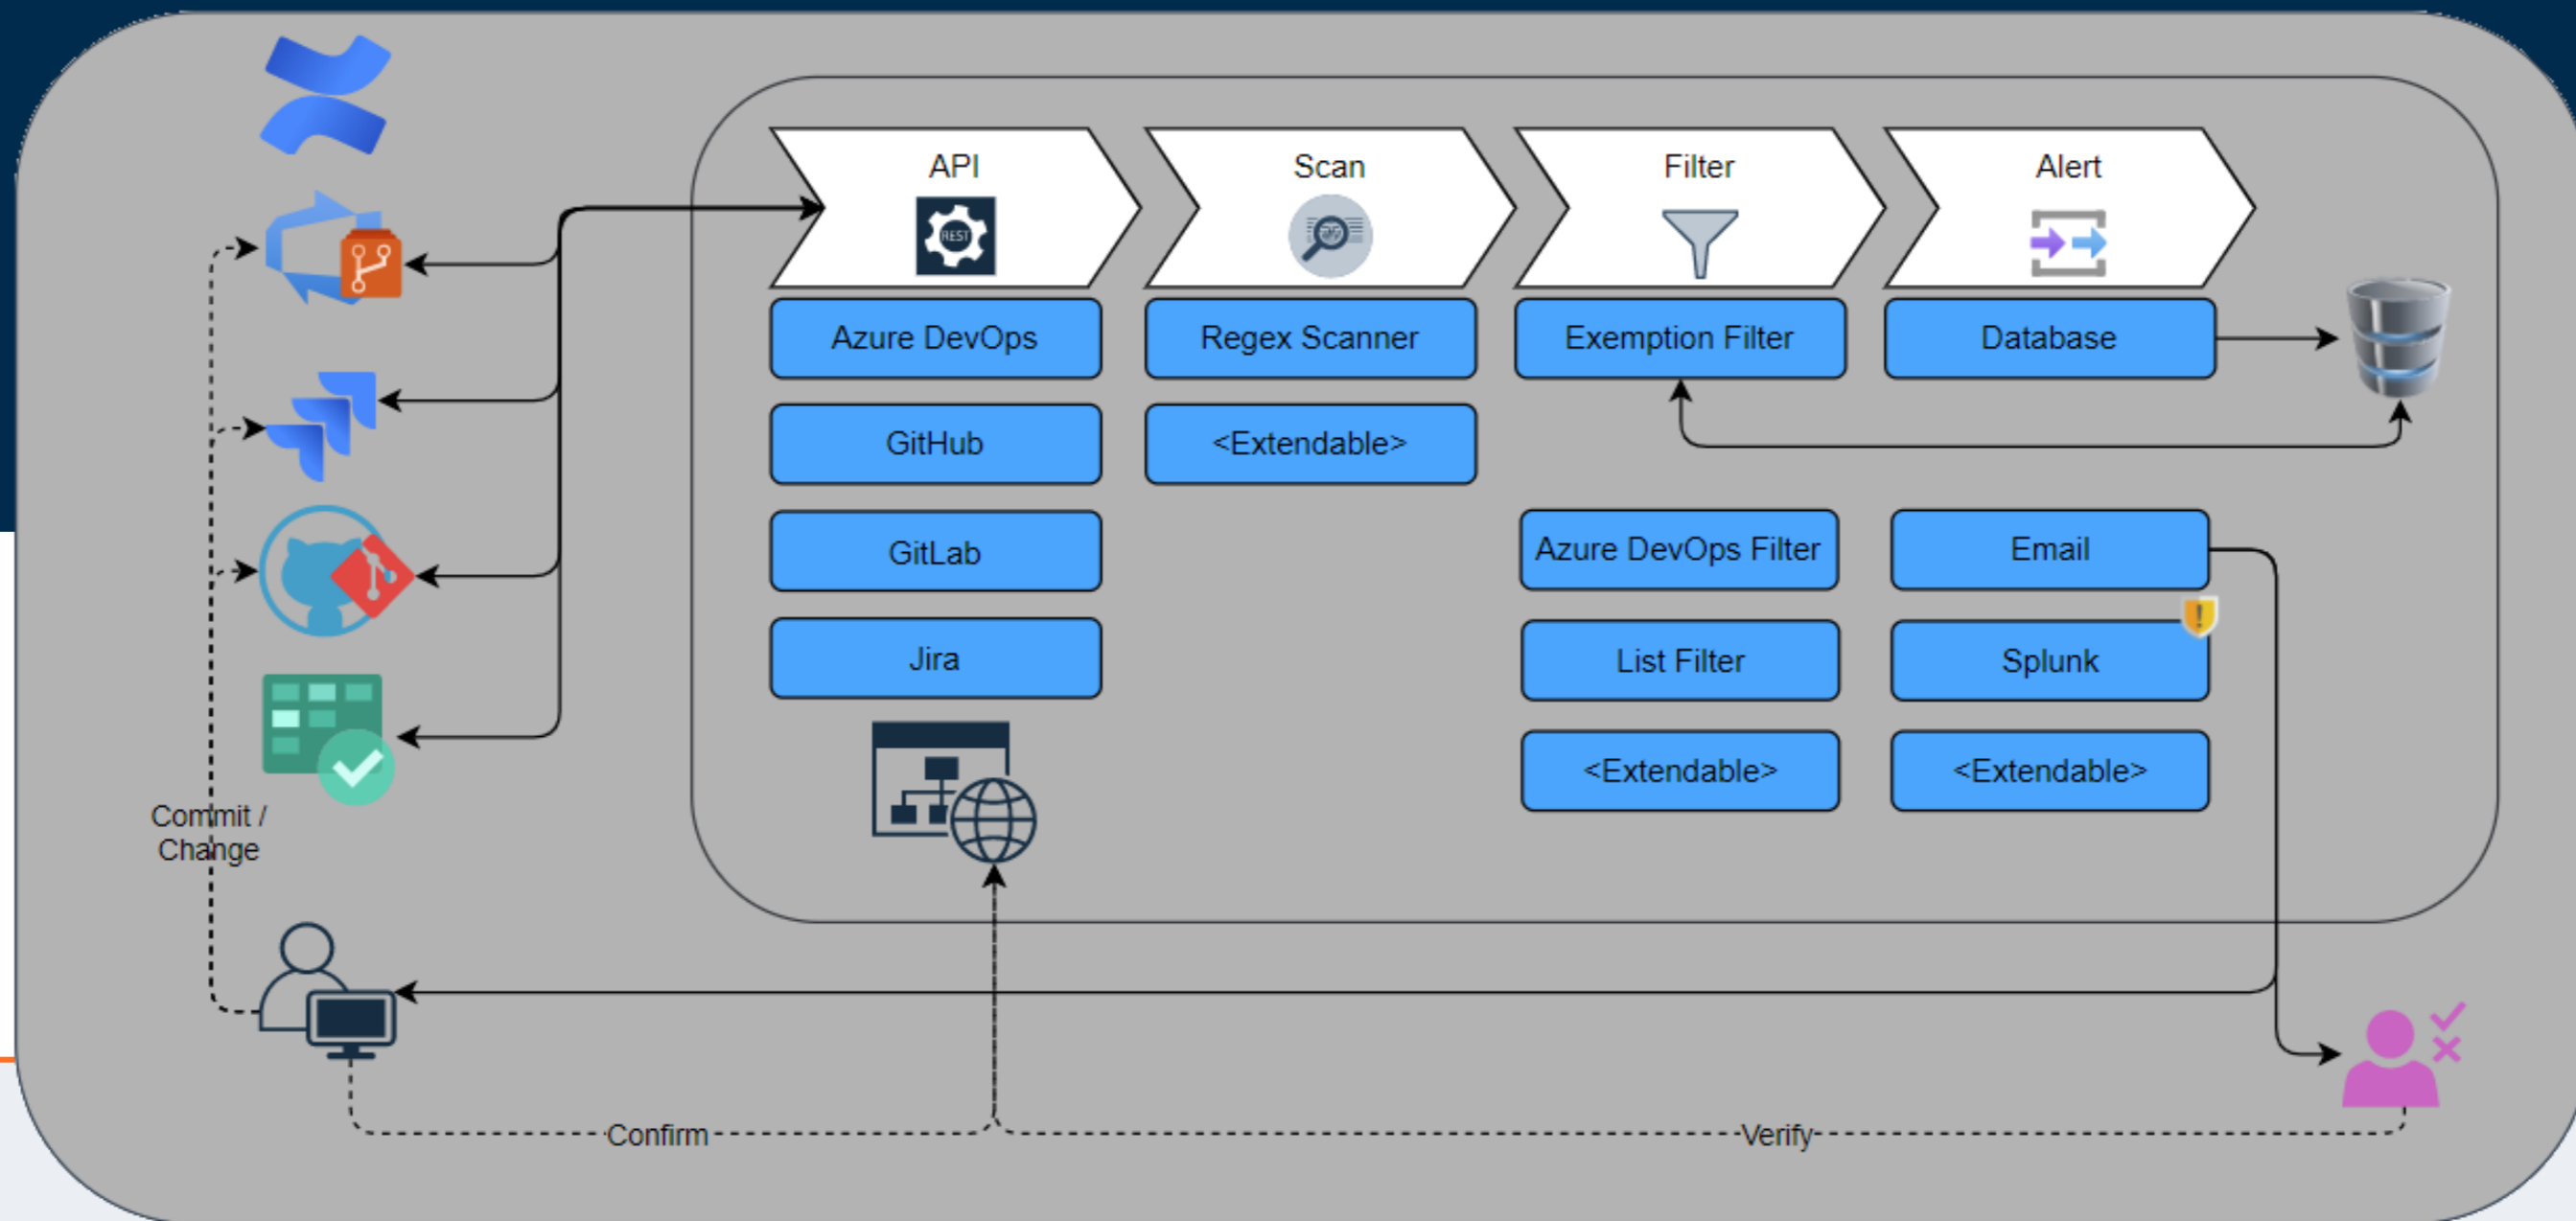

Highly configurable

The architecture behind Secret and Privacy Scanner is designed to fit all environments no matter industry or any limitation of regulation and compliance. Designed to be adaptable and fit all businesses with top-of-the-line technology.

Groups
Organize your set of rules and sources by creating different groups that are responsible for different areas, with possibility to configure unique processes per group.

Rules
Choose between a rich set of pre-configured rules or create custom rules with regex notation.

Notification
Increase awareness by setting up alerts that sends notifications to a specific target group of users or to the author of a commit.

Process and track

Insight and improvements are key factors for a robost and secure future for everyone, Secret and Privacy Scanner offers multiple possibilities to install, configure, setup, and continuously track progression by it's extended business integligence feature.

Exemption
Exemptions gives you granularly control over false positives. You can exempt on multiple levels based on file, repository, in project or globally.

OFF-LINE or ON-LINE
Created with security in mind, Secret and Privacy Scanner could be installed on-premise or in the cloud.

Reports and statistics
Business Intelligence comes out of the box, giving you full insight with customizable views and reports.
