

HARNESS THE POWER OF YOUR DATA

Achieve target business goals by taking advantage of AI and data science to evaluate your level of maturity building a Modern Data Platform.

6 BENEFITS OF UTILIZING AND UNDERSTANDING YOUR DATA:

1. Make and validate strategic decisions
2. Promote low risk data driven action plans
3. Identify opportunities and act upon them
4. Increase business efficiency
5. Identify competitive trends
6. Select the correct target audience for marketing

DATA PLATFORM HEALTH ASSESSMENT

Our world-class experts in Data & AI will identify what you need to evolve a modern data platform ready to handle the volume, velocity and variety of data to be on the cutting edge and ahead of competitors. Whether your data platform is on-premises, in Azure, or a hybrid solution, our team will assess your data models, data pipelines, and data storage strategy.

A Solliance Principal Data Architect will review your data platform and provide a health assessment audit which may include:

- Current technology assessment compared to modern best practices
- Assessment of ability to change and scale to meet business objectives
- Report of potential weaknesses and risks that need to be addressed
- Guidance on creating an achievable roadmap, both in the short-term and long-term
- Assessment of data team's ability to execute against the broad roadmap
- Review of change management process and time to deliver
- Audit document of data governance strategy and implementation
- Assessment report of storage of PII, PHI, and sensitive data
- Report detailing whether current data platform will support advanced analytics, strategic reporting, machine learning, data security, and data brokerage
