

FOUNDATIONALLM

is a platform for deploying, scaling, securing, and governing generative AI in the enterprise.

What is FOUNDATIONALLM?

An enterprise grade **agentic solution or LLM app** is complex, has a lot of moving parts, and can create significant governance and security risk if done incorrectly. FOUNDATIONALLM provides all the software infrastructure you need to **deploy fully customizable enterprise agents across your organization**.

We facilitate the most widely used GenAI scenarios:

Knowledge Management: Help users quickly find the information they seek and deliver at the right level and in the right format. Examples include **summarization, rephrasing, or retargeting** to address a persona (e.g., explain it like I'm five), sentiment and recommendations.

Analytics: Help users quickly get to the **data-driven insights they seek**. Examples include recommendations, predictions, anomaly detection, statistical analysis, and data querying and reporting.

FOUNDATIONALLM deploys a secure, comprehensive, and highly-configurable generative AI platform to your cloud environment in minutes.

</> Simplify

Integrates with enterprise data sources used by agent for in-context learning which enables RAG, CoT, ReAct, and inner monologue patterns.

Security

Provides defense in depth with fine-grain security controls over data used by agent and pre/post completion filters that guard against attack.

Scalable

Solution load balances LLM endpoints across multiple regions and supports thousands of users.

Extensible

Expands to new data sources, LLM orchestrators, and LLMs.

Hardened

Secure solution attacked by an LLM red team from inception.

Enterprises are looking to leverage AI in core business functions, such as:

Service Operations (Customer care, back-office support)

- Q&A Chatbots
- Forecasting service trends or anomalies
- Creating first drafts of documents

Product & Services Development (R&D)

- Identify trends in customer needs
- Draft technical documents
- Create new product designs

Marketing & Sales

- Craft first draft of text documents
- Personalize marketing
- Summarize text documents

Ready to bring AI into your organization?

Let's connect and walk this path together!
