# Our business offer

In Overcast we develop innovative, custom and agile solutions, that promote the adoption and use of technology.
Due to the current world status, the automatization of processes has been a challenge faced by organizations.
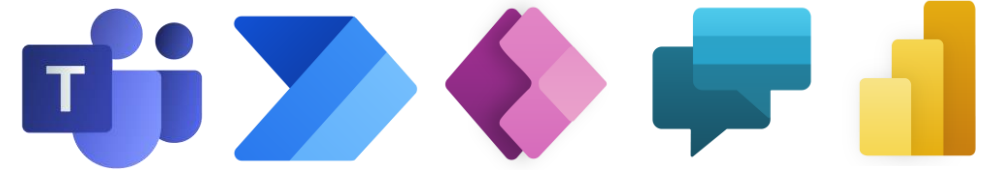

**Who are we?**

**Template apps**

**Overcast Apps**

**Contact**

# Template apps

The templates are Microsoft Teams fully developed apps, provided under the terms of the client's Microsoft license, implemented and adjusted to the costumer's needs by Overcast

**Straight to the cloud deployment** – All the template apps include deployment scripts that allow store all the needed services* in Microsoft Azure or Power Platform

**Guarantee the security of the information** – The templates adjust to the best practices in matter if security and infrastructure

**Customizable and extensible** – Even though all the template apps are implementable with minimum setups, in Overcast we can customize them or adapt them to the unique needs of each business

*Some apps may need services additional to those included in the costumer's license. Once analyzed the requirements any extra cost will be disclosed

# Template apps

## Company Communicator

Allows corporate teams to **create and send messages** destined to multiple teams or to a number of users through the chat, allowing the organization to reach every employee through their Workspace.

Used for multiple tasks, as **announcements** of new **initiatives**, **incorporation** of new members, modern **learning**, and **development** or **diffusion** in the whole organization

The app provides a simple interface for designated users to **create**, **preview**, **collaborate**, and send **messages**.

It provides a foundation for creating targeted personalized communication capabilities, such as custom **telemetry** regarding how many users have received or interacted with a message.

**FAQ+ Q&A** bots are a simple way to provide **answers** to users' **most frequently** asked questions.

A **question** can be asked to the bot and the bot **responds** with an answer contained in the **knowledge base**, if not, the bot allows the user to send a query that is then published to a preconfigured team of **experts** who help provide support by acting on **notifications** from the team itself.
