

Microsoft Copilot: Security Pre-Settings

Overcast makes adoption and transformation to change quick and easy to implement.

Copilot was designed to optimize productivity and creativity within the suite of applications, from automating repetitive tasks to real-time collaboration.

Microsoft Purview capabilities strengthen data security and compliance for Copilot.

Ensure that an organization's data remains secure or contained in a managed application.

Use common conditional access policies such as MFA and password protection in Microsoft Sign in.

Ensure devices are enrolled in Microsoft Intune that meet maintenance and compliance requirements.

Automatically prevent common types of email and device-based attacks.

Be able to detect and respond to security incidents with a complete set of threat protection services.
