

# Microsoft 365 Defender Endpoints

## Integrated threat protection with SIEM and XDR

Modernize how to protect your applications and data, and how to improve application health with Software-as-a-Service security.

Provides complete visibility into device activity and status, enabling attacks to be detected and responded to quickly and effectively.

It uses artificial intelligence and machine learning to analyze user, process and network behavior and block threats before they cause damage.

It facilitates collaboration between security and IT teams, and provides tools and reports to improve security posture and resilience.

Enables security policies and configurations to be applied at the device, group or organization level and managed from a centralized console.

Integrates protection against malware, ransomware, phishing, credential theft, vulnerability exploitation and other malicious techniques.

It integrates with other Microsoft solutions, such as Microsoft 365, Azure Sentinel, Microsoft Cloud App Security and Microsoft Defender for Identity, to provide comprehensive and consistent protection.
