Identity Governance Lifecycle Assessment

Analyze role assignments and access logs.

Identify areas for improvement and potential risks in the identity environment, based on the maturity level of the organization's identity governance model.

It enables organizations to grow and adapt effectively as their needs and requirements change

Ensures that users get access to the right resources for the right reasons.

Simplifying user identity lifecycle management

It provides visibility and control over who has access to what, and who is allowed to use that resource

Defines the access limits governing what people can request and do based on their responsibilities within the organization

It allows to effectively identify and manage access requests that could represent a security risk
