Microsoft Intune

View, manage and protect all connection points in one place

Manage and protect connection points for better hybrid work experiences and lower total cost of ownership with Intune.

Provide remote support to employees, resolving incidents or performing actions such as locking, wiping or resetting devices.

Distribute and update enterprise and third-party applications to employee devices, whether they are connected to the corporate network or not.

Monitor and analyze the status and performance of employee devices and applications, identifying potential problems or threats.

Manage your organization's devices, whether Windows, iOS, Android or macOS, from a single console.

Configure and apply security, compliance and privacy policies to employee devices and applications, whether corporate or personal.

Protect corporate data on employee devices and applications, preventing leakage, theft or loss of sensitive information.
