

Microsoft Purview Information Protection

Information governance and protection

Protects data wherever it resides. Helps protect sensitive data across clouds, applications and devices.

Comply with data protection regulations and legal requirements, such as RGPD, LOPD or HIPAA.

Discover and catalog the data you have in different sources, such as Azure, Office 365, SharePoint, SQL Server and others.

Monitor and audit the use and movement of sensitive data.

Apply classification and labeling policies based on data content, context and confidentiality.

Generate reports and dashboards to get a comprehensive and detailed overview of the status of your sensitive data.

Protect data with encryption, access control and data loss prevention (DLP).
