Power BI Themes - Your individual reporting style guide – 2 days project

We create your individually applicable Power BI "master template" including comprehensible documentation.

The style guide, individually adapted to your company, includes corporate colors, fonts and a structured report page layout such as size settings, headline, navigation elements as well as symbols for user-friendly and, if required, barrier-free reporting. You will also be empowered to make adjustments based on this guide as design requirements change, either independently by your reporting specialists or with our support.

About SOLVIN

SOLVIN is a management consulting company focusing on PPM topics. We care about future-proof solutions that meet your challenges in the PPM environment in a beneficial way. Our consulting is characterized by the fact that we make our results applicable with Microsoft standard technology. For this offer, we will focus on the Microsoft Power Platform and related Microsoft services in the PPM environment (Project for the web, Planner, Teams, Todo, SharePoint, etc.). The following agenda is intended to provide a basis for possible cooperation:

Process

In case design guidelines already exist in the company in the form of a style guide or CI document, we will take these guidelines into account. Otherwise, after booking the offer, you will receive a questionnaire regarding your company-specific design specifications, which you fill out in advance. After reviewing your requirements, our BI consultants will deliver a Power BI template file adapted to your needs and a documentation (style guide) with the implemented specifications within a few days. This is followed by a short, personal exchange to hand over the template.

- You choose your top 3 visualizations from the set of countless visualization types available in Microsoft Power BI, such as tables, bar charts, KPI maps and many more. We will integrate these into your template customized to your design. This allows you to immediately use and see this template after integration as a copy template for your standardized reporting.
- You receive the framework based on many years of consulting experience in the BI environment summarized in your master template and can then integrate your company-specific data.
- In this way, you can achieve a standardized reporting system with your design specifications, regardless of your maturity level - whether at the start of report development or for optimizing your existing reporting system.

Our experienced BI consultants will be happy to advise you beyond the scope of this offer or on other BI topics - just contact us!

Your added values

- consistent appearance in reports
- easier reading and understanding of reports (usability)
