

Azure Security

Make your Azure platform more secure – and increase your Secure Score

Azure offers a wide range of integrated safety services, which help you protect data, apps and infrastructure – both fast and simple

Azure AD Multi-Factor Authentication (MFA)

Azure AD Multi-Factor Authentication (MFA) provides an extra layer of security on user level. At log-in the user is asked to approve the sign-in request on the phone. This opens for passwordless login, where authentication happens by phone and facial recognition or with Azure AD.

Let us configure your AD Multi-Factor Authentication (MFA) – Conditional Access

With solvo it's Conditional Access package you get:

- Activation of licenses
- Activation of MFA on selected users or applications
- User guide to configuration of MFA
- Plan for activation of MFA on remaining users

Get the whole package – 2 work days: total price 15.500 DKR.

Configuration of Azure AD MFA – Conditional Access

Azure AD MFA can be activated with Conditional Access. With Conditional Access we set up policies for a specific situation by which the user will be prompted for MFA authorization. This could, for instance, be if logging in from an unknown location, a non-compliant pc or another specific application.

Azure Security

Strengthen security of your Azure Platform with built-in tools

solvo it's Azure AD Baseline – secures access to Azure and Office 365 and meets the industry's requirements and recommendations for security.

With Azure AD Baseline we make sure that the fundamental configurations are in place. By optimizing the existing Azure AD configuration and review of rights, we create a full overview of users with privileged roles.

Ad an extra layer of security with an "emergency" account

Monitoring will provide you with an overview of logins, but also help with the handling – including periodic change of password and guide in case of unauthorized use.

Benefits of using Azure Security:

- Significantly improved secure score in both Azure and Office 365
- Full control of administrator accesses in Azure and Office 365 through Privileged Identity Management
- Monitoring of accesses and actions plans for unauthorized access to Azure and Office 365 through, among others, Azure Monitor and Log Analytics

Azure AD Baseline package

- Review of external accounts with admin. rights
- Review of privileged roles
- Suggestions for clean-up in privileged roles
- Configuration of emergency accounts
- Monitoring of emergency accounts
- Suggestions for additional security measures (e.g. Azure AD PIM)
- Documentation

Get the whole package – 2 work days: total price 15.500 DKR.
