

Migrate from Informatica to Microsoft Fabric seamlessly with Sonata

Break free from fragmented data tools – cut costs, accelerate insights, and become AI-ready with Microsoft Fabric

Enterprises using Informatica often face growing licensing costs, siloed workflows, duplicated data pipelines, and delays in turning data into action. Managing multiple tools across ingestion, transformation, analytics, and BI creates inefficiencies and governance challenges.

Microsoft Fabric changes this – bringing everything into a single, unified platform.

How does Sonata simplify your transition?

Sonata enables a seamless migration from Informatica to Microsoft Fabric through a structured, tool-led approach:

01

Zero-cost assessment:

Automated scan of workflows, dependency mapping, and a clear migration roadmap with timelines and cost estimates.

02

Migration design:

Target-state architecture, migration patterns, and governance-first design tailored to your environment.

03

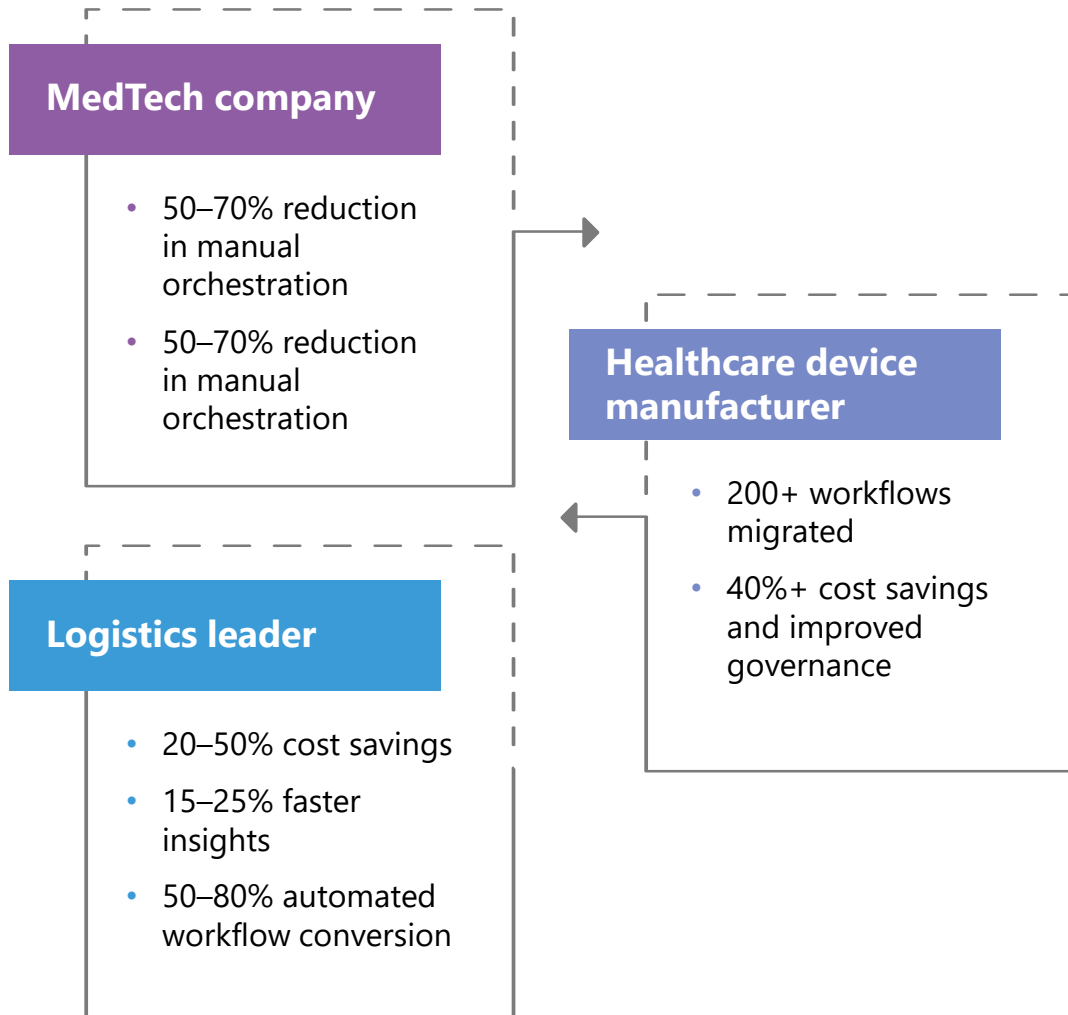

Migration, testing and cutover:

Automation-led migration (up to 50–80%), validation, optimization, and smooth transition to production.

Why enterprises choose Sonata for Fabric migration?

- ✓ Microsoft Fabric featured and launch partner
- ✓ Proven migrations from Informatica to Fabric
- ✓ Tool-led approach powered by Sonata IntelliConvert

What results are organizations already seeing?

Talk to Sonata to explore how you can consolidate tools, reduce costs, and build a future-ready data platform with Microsoft Fabric.
