Technology

Identify technical requirements and adapt your Microsoft environment

to deploy Copilot for M365 and maximize its potential.

Measure business value with Sopra Steria

At Sopra Steria, we are convinced that a successful experiment with Copilot for Microsoft 365 should make it possible to concretely evaluate the added value and the ROI of the solution for businesses.

To do this, we propose the implementation of a tailored strategy that perfectly meets this objective as well as dedicated support for your pilot group.

This support provides the organization of acculturation sessions to understand the capabilities offered by Copilot for M365 and to raise awareness among your employees about responsible and controlled use of AI.

We also ensure that stakeholders are aligned on a common and shared vision of the challenges, progress and conditions for a successful deployment of Copilot for M365.

Copilot licensing requirements and possible additional needs to ensure data security and measure adoption are also discussed.

We define the project governance arrangements, explore, define and prioritize the use cases of Copilot for M365 with the users of the pilot group.

We create an adoption plan applicable to all pilot users and train members in the use and best practices related to the use of Copilot for M365.

We support and measure quantitative and qualitative uses to feed the calculation of ROI per use case and produce a detailed report of the experimentation.

In conclusion, **we help you make the right choice for investment in Copilot for M365.**
