How **Secure** Is Your Cloud?

Gain a comprehensive insight into your cloud security posture and a pathway to achieving security maturity using Sourced's **Cloud Security Assessment**
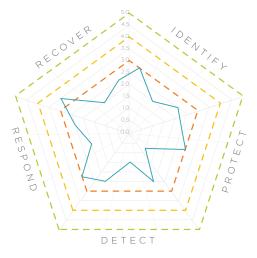

What Is The Cloud Security Assessment?

The Sourced Cloud Security Assessment helps **Chief Information Security Officers (CISOs)**, **Heads of Cyber Security** and **Security Managers** assess the effectiveness of their organisation's security and governance practices in their cloud environments.

Sourced applies the five security functions adopted from the **NIST Cyber Security Framework** and best practices gained from years of experience building cloud environments in highly regulated industries. The assessment is cloud-agnostic and provides a holistic security maturity review of your cloud assets.

Our consultants will evaluate the maturity of your controls for every relevant cyber security category, setting prioritised recommendations that form a roadmap to meet your cyber security risk management objectives.

Optimise Your Security Maturity

To give you the edge when enforcing security and managing risk, our dedicated consulting team provides a comprehensive view of your cloud domain's security. As subject matter experts, Sourced provides weighted recommendations for uplift, informed by **comparative benchmarks** against leading highly regulated peers.

CURRENT MATURITY

STAGE 1 CONSISTENT

STAGE 2 MEASURED

STAGE 3 OPTIMISED

BENEFITS

Improve Maturity

Achieve security maturity, with a clear roadmap and effort estimation aligning to your risk strategy

Trusted Advisors

Leverage Sourced's deep expertise in cloud security for highly regulated industries

Enable Governance

Embed a robust cloud security culture across teams and cloud environments

Build Assurance

Establish confidence in your organisation's cloud security practices

Recover

Protect your organisation against reputation loss, regulatory fines, and substantial business costs

Why Sourced, Why Now?

Every year, the world economy loses **$600B USD** to cyber security crime, driven by increasingly sophisticated and well-organised adversaries. The average cost of a data breach now exceeds **$2M USD,** while regulatory fines for organisations not diligently protecting their clients' personally identifiable information (PII) can exceed **$100M USD**. These penalties will become more significant as cyber security crime continues to rise. In this environment, leveraging the latest technologies to drive innovation in the security domain is a must, otherwise your business will become exposed, now more than ever before.

With over a decade of experience in helping highly regulated industries deliver compliance, security, and governance, we understand the technical challenges that our clients face. Sourced takes a holistic approach to tailoring solutions that work with your business – across people, processes, culture, and tooling.

Sourced is here to help; contact us to learn more about our cloud security offerings.

Our Case Studies

LARGE AUSTRALIAN BANK

THE CHALLENGE

Our client was unsure of the security levels on their existing cloud platform. To ensure that the applications meet governance standards and recommended cloud provider practices, they asked Sourced to conduct a security assessment across four existing applications.

THE SOLUTION

With a strong focus on security maturity and deployment methodologies, Sourced set out to conduct a gap analysis and security assessment across the applications. Starting with the platform assessment, a discovery session was conducted with the platform team, followed by architecture and supporting documents review in order to provide a gap analysis and a security remediation plan.

THE OUTCOMES

Sourced encouraged success for future application migrations by uplifting the client's security maturity modelling and gap analysis capabilities. Following on from the assessment engagement, Sourced helped the client develop a new approach for application deployment with embedded controls to enable innovation while ensuring the security of their cloud environment.

LARGE ENTERPRISE CUSTOMER

THE CHALLENGE

As a consequence of a cyber-attack, our client realised the immense need to conduct a holistic security maturity assessment across their large scale cloud platform.

THE SOLUTION

Sourced worked closely with this client to conduct the security assessment on existing accounts and third-party tooling. We reviewed platform provisioning and organisational level configuration to ensure security across service controls policies and account-level controls.

THE OUTCOMES

After presenting our findings and remediation plan back to our client, the scope of work was expanded to leverage our expertise and develop a Vulnerability Management Automation Platform. From this security assessment and the more significant work that followed, we have enabled them to utilise their cloud platform and third party solutions to significantly improve the security, reliability and cost management across all applications on their cloud platform.

ABOUT SOURCED

Sourced Group is a global cloud consultancy that helps enterprises make the most of cloud services with a focus on security, governance and compliance. We provide professional services for securing, migrating and managing the cloud infrastructure of large enterprise customers in highly-regulated industries.
