

Azure Virtual Desktop - 2 week Implementation

The SpiderAzure AVD Implementation allows you to seamlessly roll out Azure Virtual Desktop, enabling your teams to work securely and effectively from any location, on any device. Switch on remote working and support your teams.

SpiderGroup's reliable and secure service gets you set up with Azure Virtual Desktop quickly and efficiently, over the course of a two-week rapid deployment that incorporates:

- Proven Architecture
- Dedicated Project Management
- Best Practice
- Foundation Setup and Deployment
- User Support

The implementation takes a phased approach, following a standardised format:

- Defining the scope, understanding your needs, and advising on the best approach and expected costs
- Designing and configuring your virtual desktop tenancy using our advanced remote delivery methods
- Testing to ensure the platform is fully operational within your specifications
- Handover to your team, with user training for key stakeholders and super users

We will also advise you on any integrations or apps that would add value to your platform.

Beyond implementation, we provide ongoing support and training to ensure you are able to successfully adopt and utilise the system.
