

# Condmaster Cloud

## What is Condmaster Cloud?

Condmaster Cloud is a Software-as-a-Service (SaaS) solution that makes it possible to connect to and use Condmaster Ruby and Condmaster.NET via the Internet, eliminating the need for local, self-hosted installations.

- The Condmaster software suite and dependent software such as SQL Server is hosted by SPM Instrument in Condmaster Cloud.
- The measuring devices communicate with Condmaster Entity Server (CES) in Condmaster Cloud. If the local network must not be used, the devices can connect directly to CES via an OpenVPN tunnel over 4G/5G, ensuring efficient data transfer.
- Condmaster Ruby operates as an Azure RemoteApp, accessible through Windows App. It can be run from a Windows environment as well as from a Mac, Linux, Android, Chromebook, and iPad.
- Condmaster.NET can be accessed from any web browser.
- Integrations with third-party systems such as PLC systems or other systems are possible.
