SPR helps you change the way you work and drive business.

Stay current and viable to compete in the marketplace.

Building and Modernizing Custom Applications

Sluggish, outdated platforms won't stand up to the demands of your employees. These sophisticated tech users want to work more productively, spend less money and time on training and support, increase sales, among other goals for your enterprise business. Technology must give users a rich experience to keep them coming back.

We provide two options to work with us on a tailor-made solution that will cater to your specific business needs and keep pace with your enterprise as it grows.
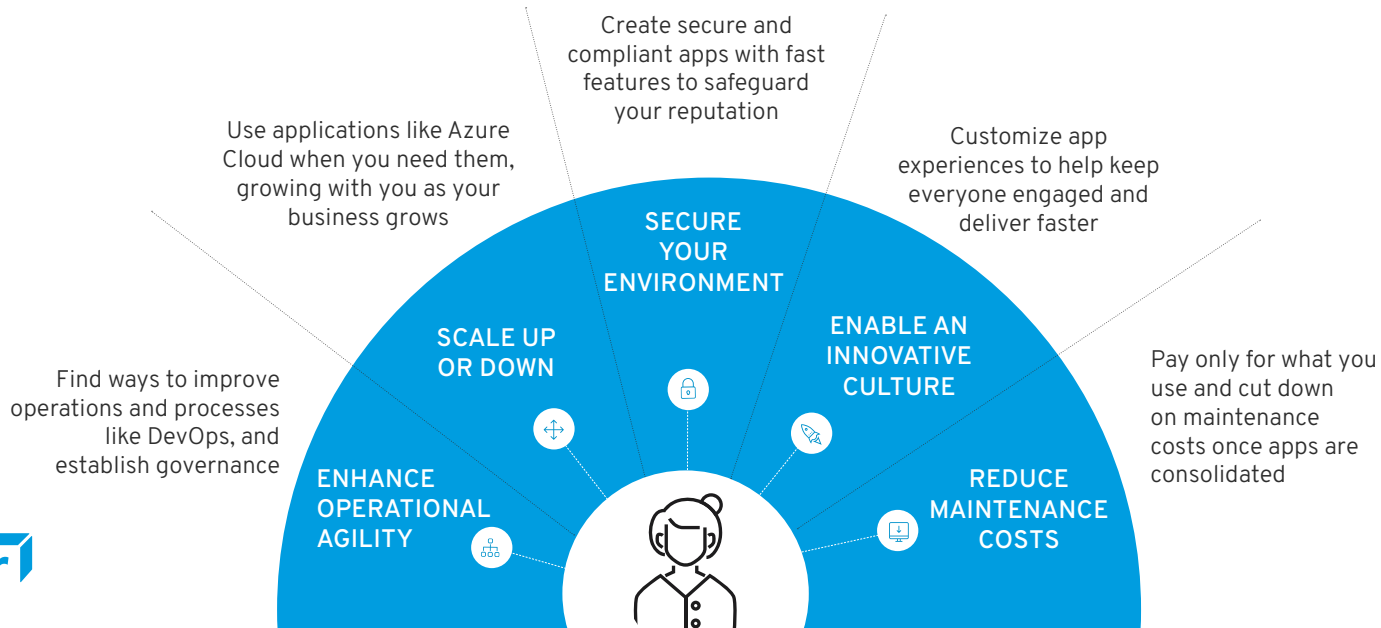

Building a New Application

If you need a new platform or application, we custom build what's right for your business. This allows you to control costs, scale up to support business growth, innovate faster, and operate more securely.

Modernizing a Legacy System

Businesses must stay competitive with modern applications and processes. We work with your existing systems, helping you consolidate or decommission old duplicates, migrate data into a single repository, and integrate with modern apps.

Why Modernize

Create secure and compliant apps with fast features to safeguard your reputation

Use applications like Azure Cloud when you need them, growing with you as your business grows

Customize app experiences to help keep everyone engaged and deliver faster

Find ways to improve operations and processes like DevOps, and establish governance

Pay only for what you use and cut down on maintenance costs once apps are consolidated

SECURE YOUR ENVIRONMENT

SCALE UP OR DOWN

ENABLE AN INNOVATIVE CULTURE

ENHANCE OPERATIONAL AGILITY

REDUCE MAINTENANCE COSTS

What We Do

We follow a simple yet sophisticated method to define the greater business purpose, pinpoint the best technology for it, then quickly design and build a solution with precision and flexibility.

Strategy Workshops	App Assessment	Research, Ideation and Concept Testing	Interactive Design	Development
We conduct a series of workshops to understand your current status	We assess the approach and considerations, outline the recommended solution, and identify best practices for deployment	We conduct competitive and user research, ideation and user testing, to define key business requirements for your product	We build a user-validated conceptual prototype using UX guiding principles and a detailed product roadmap	We build the features of your app or platform, migrate data, configure diagnostics, test it and deploy it to your targeted environment

Customer Case Study

How to Connect Colleagues Around the Globe
With 65+ businesses and operations across the globe, IDEX wanted to increase corporate productivity and encourage dialogue between the engineering and development groups at different business units. But a basic intranet was stinting the collaborative efforts and, in turn, hampering creativity and internal innovation.

SPR built a cloud-based intranet in Office 365 that centralizes data and requires zero maintenance. The solution is self sufficient with features like single sign-on, automated content and metadata transfer, custom charting, and access to on-premises custom applications.

A User's What's-in-it-for-me Moment
Thanks to the collaborative work between SPR and the client, we built a modern platform that helps IDEX users easily work together, even across time zones.

Key benefits:
- If necessary, users can work remotely from anywhere in the world, on any device.
- IDEX colleagues easily share innovative ideas, in addition to sharing documents.
- Users have one centralized spot to find the data and information they need.
