The Problem

Retail store workers often find issues with damaged packaging in inventory shipments.

They need to report the damaged package up through management so that inventory can be adjusted, and other stores can be alerted of the potential that similar packages from the same manufacturer may need to be checked as well.

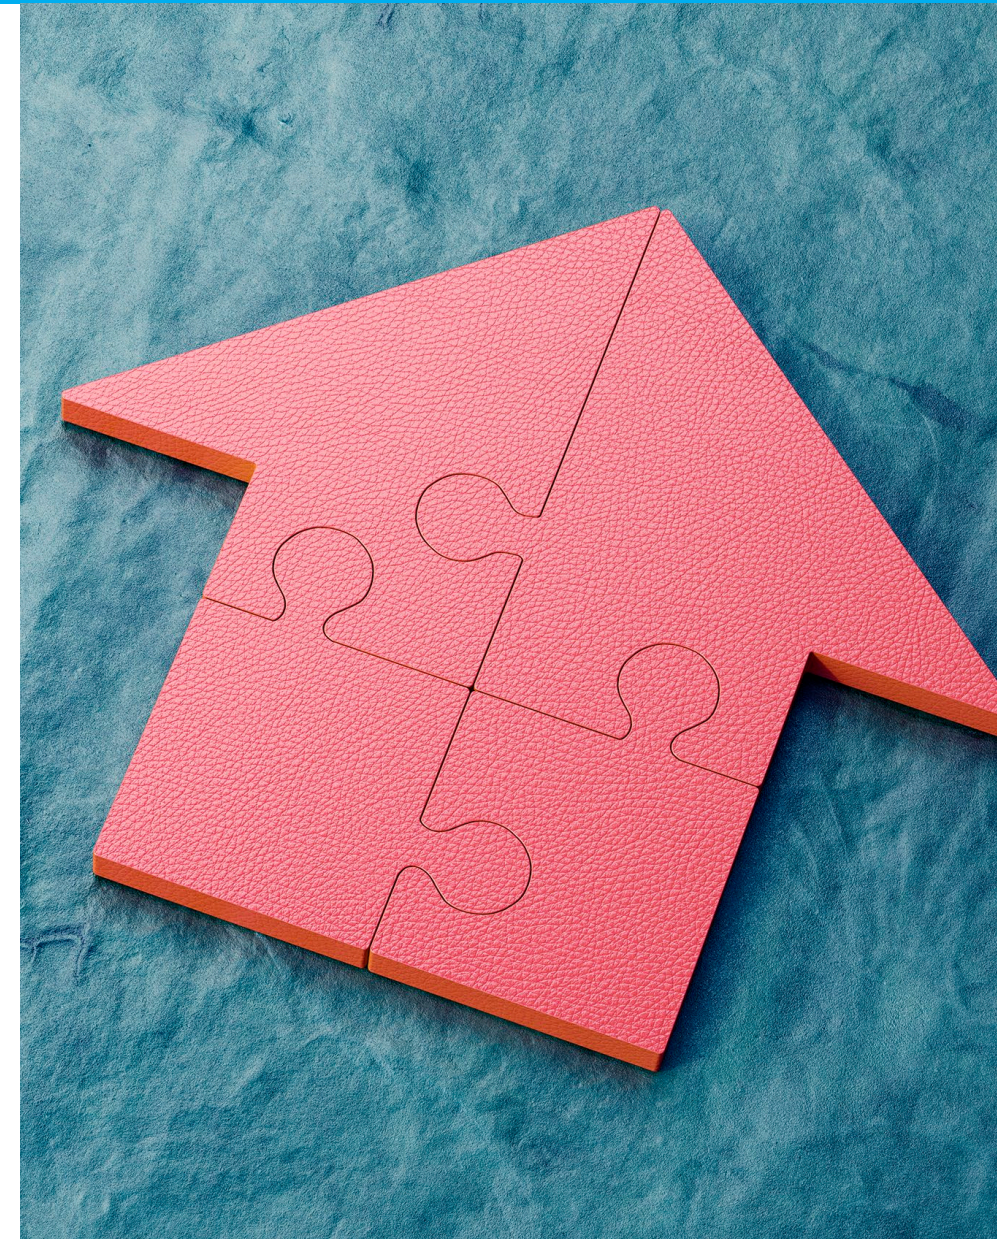

The Solution

Spyglass's **Damaged Packaging Application Jumpstart** is a **5-week/\$25,000 implementation** that allows the use of Power Apps to capture data of the damaged package via a mobile device.

Our Implementation:

- Allows employees to easily document any damages they come across using a mobile device
- Enables the employee to create a ticket with the damages that gets routed to a corporate employee for further investigation
 - Retail employee can track the ticket from their mobile phone or tablet device for clear updates and understanding
