

Simplified Security Management for Multi-Cloud environments

- **Problem**

- Our client was new to the Azure platform and were concerned about the new threats that could be exposed by moving workloads to the cloud.
- Their current tool set was lacking functionality.
- The security team does not have cloud expertise and wanted something easy to integrate with Azure.

- **Solution**

- We reviewed their cloud workloads to make recommendations to enable Defender for Cloud plans that would be valuable and provide the level of protection they needed.
- Reviewed and tuned security policy to provide targeted recommendations for remediation.
- Provided training and knowledge transfer on reviewing recommendations and planning remediation.

- **Benefits**

- Our client was able to quickly get Microsoft Defender for Cloud enabled and tuned to provide valuable insights into their Azure environment.
- Based on the plans enabled our client was able to get insights into if sensitive data makes it into Azure and if there are insecure configurations with those workloads.
