

DPi30- Replacing Cognos

A leading global Healthcare Technology Company headquartered out of the Midwest reached out to us for help with their overall data and analytics platform. Their Rental Therapy business provides innovative rental solutions to help maximize wound healing and prevention, reduce complications of immobility, and deliver efficient bariatric care for Healthcare customers.

This business line needed to modernize their data platform and reporting that resided on an outdated on-premises Cognos platform. They wanted to be rid of Cognos and offload their analytics to Azure and Power BI. The overall goal is to dramatically enhance the analytics capabilities by integrating other business data and capabilities (external and internal) to drive better customer outcomes through detailed and dynamic customer business reviews.

Phase 1 of this project included a DPi30 deployment. Spyglass successfully implemented an Azure Synapse data platform in 5 weeks including all the foundational platform elements to prepare for Phase 2 the Analytics Power BI build out.
