

Creating an Internal Intranet for a Technology Consulting Group

- **Problem**

- A technology consulting group needed help creating an internal intranet for their organization to help keep everyone connected and informed. They were struggling with how to produce a clean design and build and organize all the different pages that they wanted.

- **Solution**

- We used our Intranet in a Box solution to help the client create a beautiful and functional SharePoint intranet site in just a couple of weeks. We deployed all of the functions they requested and used a design template that they approved of.

- **Benefits**

- This client now has a fully functioning and aesthetically pleasing internal SharePoint intranet site. They can house important documents, track PTO requests, and more. Our client feels they are more organized and able to communicate with their employees in a more efficient way.
