

Purview and Profisee for Master Data Management

- **Problem**

- One of our manufacturing clients was working with Spyglass on their Azure Data Platform; and looking at ways to update their master data management (MDM) platform and selected Profisee, which integrates well with Microsoft's Purview.
- Master data management is an important aspect of a unified approach to data governance.

- **Solution**

- The combination of Azure Purview and a deeply integrated MDM solution, such as Profisee, is a tremendous benefit for the client's data platform.
- Spyglass worked with Profisee to assist the client in establishing the technical foundation for data governance.
- We achieved this by leveraging a blended team including resources from Profisee Consulting Services and a parallel implementation and integration of Purview.

- **Benefits**

- Our engagement resulted in the client having a fully integrated data management platform that complies with the ITAR and IT Management requirements set out by their compliance team.
