SQL Performance Analysis
— increase the performance of your SQL Servers.

Problem: Slow IT systems

Performance issues in your IT systems can cause frustration, delivery problems and data analysis headaches, reducing the ability to make good, timely decisions. In the worst case, this can lead to lost customers, business and revenue. It's not always easy to know precisely where a problem is and the action to take to solve it. But without hard facts, it's difficult to get anywhere, and our customers often experience one or more of the following problems:

- Difficulty determining if the problem is related to hardware or software.
- Difficulty determining if the problem is related to a specific application, database, server, network, storage solution or other IT infrastructure.
- Difficulty formulating an adequate solution even when the problem can be identified.
- Difficulty getting various hardware, software and service suppliers to agree on a cost-effective, workable solution.

Solution: SQL Performance Analysis

With the SQL Performance Analysis service, we compile information on any performance issues in Microsoft SQL Server and document them in a report for presentation to you, covering the following:

- Is all or parts of the problem in Microsoft SQL Server?
- If so, are the problems located in the CPU, memory, disk, network, configuration, code, index, database design, logic or other database-related areas?
- A Microsoft SQL Server expert for data collection, analysis, compilation and reporting with concrete suggestions for improvement
- What can be done to solve any problems in order of priority?
- How to avoid problems in the future.

Advantages of SQL Performance Analysis

- **Help with identifying performance issues in your database**

- **Fixed price and short delivery times**

- **Fact-based documentation for further discussions with any third party providers.**

- **Fast, low-cost initial diagnostics means low risk for you but the prospect of major performance improvements.**

Number of instances. Fixed price excl. VAT:
DB Instance 1 .... SEK 27,500
DB Instances 2–5 ...... SEK 20,000 per instance
DB Instance 6– .... request offer
