

Ensuring your Cloud Environment is Optimised, Reliable, Secure & Compliant

As your organisation adopts cloud, it inevitably means an increase in the number of cloud services being provisioned. In turn that can increase the risk that cloud has to your organisation. Successfully embracing cloud services requires a different approach to how we adopt, manage and govern the environment. Keeping control of your Cloud Governance is one way to ensure you stay on the top of risks.

Introducing our **3 Day Comprehensive** Cloud Governance Audit. We define Cloud Governance as having identified business risks with documented policy statements laying out the standards, architectural best practices and goals. Having metrics and processes detailed to ensure adherence to policy statements. Finally, having aligned the risks to one or more of the five pillars for effective Cloud Governance.

Benefits of our 3 Day Azure Governance Audit

- ▶ In depth analysis into your Azure infrastructure and applications by one of our certified Azure consultants
- ▶ Benchmark your current Azure setup against best practice
- ▶ Identify and mitigate the risks associated with your existing architecture in terms of security and resource consistency
- ▶ Optimise costs & resource utilisation to improve efficiency
- ▶ Innovate faster to get the most out of your Azure environment

Our Cloud Governance role will provide you with a Cloud Governance Framework minimum viable product (MVP). That framework will contain the risks, goals and standards, metrics and indicators, compliance processes / checks and tool recommendations. If you have a large cloud estate, we highly recommend you utilise the services of a 3rd party specialist cloud consultancy firm such as SR Cloud Solutions to continually review your cloud governance on a monthly basis.

A popular service is our Cloud Guardian monthly review service that enables our team of cloud consultants to oversee that your cloud infrastructure is well governed utilising the five pillars of cloud governance. For more information regarding our Cloud Guardian service, please speak with your SR Cloud Solutions representative.

5 Pillars of Effective Cloud Governance

Operational Excellence

Operational processes for efficiently deploying, managing and monitoring your Cloud solutions.

Performance Efficiency

Maintaining an optimal level of performance whilst responding to changes in demand.

Cost Optimisation

Optimise to avoid or eliminate unnecessary costs or suboptimal resources.

Reliability

Withstanding and recovering from system failures in such a way that avoids downtime or data loss.

Security

The continuous security of your applications, data and supporting Azure Cloud resources.

Our Cloud Guardian service ensures security and governance policy compliance of your cloud infrastructure is in line with industry best practice.

The ultimate benefit of utilising SR's Cloud Guardian service is it provides total peace of mind to our clients and ensures that their Azure infrastructures are running optimally, securely, and within budget.

Free Azure Best Practice 1 Day Workshop

SR Cloud Solutions is an experienced Microsoft Partner, recognised for helping customers exploit the transformative power of the cloud. The Azure Best Practice Review is a free one day workshop, prepared and delivered by our Microsoft Azure certified experts. This interactive session is held with members of your team who have domain knowledge of your applications and Azure environment.

Based on the workshop, you will receive a report tailored to your business needs. The report will provide findings against each of our five pillars of Azure Best Practice. For each pillar you will receive a traffic light rating of 'High', 'Medium' or 'Low'. The report will also include a summary of recommendations, and steps to continuously improve your Azure based environment.

Get the most from Azure with our free Best Practice Review. To discuss your organisation's needs, please **contact: Info@srcloudsolutions.co.uk**.
