What Makes Bolt *Different*

Your Prototype IS Production Code

What you build in Bolt is real TypeScript, React, Node.js — not a mockup that gets thrown away. Deploy directly or hand off clean code to your engineering team.

Runs In Your Browser

WebContainer technology compiles Node.js to WebAssembly. No cloud VMs, no Docker, no server setup. Instant start, zero infrastructure tickets.

Full-Stack From a Single Prompt

Frontend, backend, database, auth, deployment — all generated together. React, Vue, Svelte, Next.js — your choice, not ours.

Enterprise-Grade Security

Browser sandbox execution, automatic vulnerability scanning, SOC 2 compliance, and self-host option. The AI builder your security team won't reject.

TRADITIONAL APPROACH

- × Weeks to scope and prototype
- × Static mockups that mislead stakeholders
- × Separate prototype and production builds
- × DevOps tickets for every environment
- × Limited to existing BI tools

WITH BOLT

- ✓ Working prototype in minutes
- ✓ Live interactive software for review
- ✓ Prototype IS the production code
- ✓ One-click deploy, zero infra tickets
- ✓ Custom anything — dashboards, tools, portals

What Teams *Build*

Internal Dashboards

Replace spreadsheet workflows with interactive visualizations. Real-time data, filtering, and export.

Client-Facing Portals

Polished, white-labeled dashboards that replace static PDF reports with live, interactive experiences.

Operations Tools

Custom workflow automation, project trackers, and coordination tools built for how your teams actually work.
