

# Cloud Operations made Easy, Fast and Compliant.

## Why is this important?

Cloud Operations became a bottleneck facing process to deploy taking weeks, compliance still being a struggle, and cloud spend being way higher than expected. In short, the Cloud isn't delivering the value it promised. Time to fix that.

## What we do about it.

StackGuardian's Orchestration Platform instantly **reduces backlogs**, immediately **accelerates deployments** and drastically **simplifies compliance** in terms of cost, security and regulation.

## The business benefit.

ROI

## The cost of doing nothing.

The cost of doing nothing isn't acceptable for any business. That cost ranges from a waste every single month making the monthly cloud invoice more expensive for no reason to amounts potentially derailing the company as a result of security and regulatory failure facing tremendous costs, fines and the price of reputational damage.

# Solving Business, Cloud Operations and Cloud Consumer problems.

## What we solve for the business.

Stackguardian's Cloud Orchestration Platform drastically reduces time to value. And by the way, all aligned with what is important for you in terms of cost, security and regulation. Difficult to believe I know...

Modern business are software centric and are running that software in public cloud. That comes with a lot of benefits being mainly Scalability, Cost and Resource Optimization. All these benefits come hand in hand with the big time to value promise the cloud got been created for. However... Businesses struggle reaping those benefits. Predominantly 2 reasons prevent that.

First, the agility the cloud comes with did lead in many organizations to chaos when it comes to spend, security and regulatory compliance issues inducing a lot of incremental costs. Incremental costs acquiring the necessary skills that are extremely rare to find, incremental costs as a result of suboptimal designs, and last but not least incremental costs being the result of security and regulatory breaches leading to massive impact ultimately reputation wise losing revenue, customers, etc.

Second, many businesses didn't just watch that problem. Multiple initiatives did get taken addressing at least part of those issues. The consequence however is that lengthy, cumbersome and manual process in combination with a sprawl of tools got been introduced in an attempt to solve this. Patrially successful. This approach however did eliminate the agility the cloud comes with completely resulting in disastrous time to value.

StackGuardian's Cloud Orchestration Platform is unique in addressing the above issues enabling businesses to combine agility and compliance resulting in drastic time to value improvements.

## **What we solve for the cloud experts.**

StackGuardian's Cloud Orchestration Platform immediately addresses skillgap, reduces ticket backlogs and accelerates deployments. And by the way, all aligned with what is important for you in terms of cost, security and regulation. Difficult to believe I know...

To address severe spend, security and regulatory issues Cloud Operation teams did insource most if not all build and deploy responsibilities. Mainly to regain control leading to the desired outcomes. Logically did that put a big strain on that operation in many ways most important impacting the Cloud Operation team's performance. Just scaling up the team wouldn't do the trick. Skill gap and the lack of available cloud resource is a big issue in today's market. Even if that particular issue would be solved it wouldn't address the lengthy, cumbersome and manual process that Cloud Operations teams go through in combination with a sprawl of tools to assess Cloud Consumer requests in order to provision compliant cloud infrastructure.

In summary 3 particular issues are preventing Cloud Operation teams to perform a great job today. Skillgap, ticket backlogs and lengthy, cumbersome and manual approval process. StackGuardian's Cloud Orchestration Platform is unique in addressing these issues by drastically simplifying cloud orchestration and automating compliance.

## **What we solve for the cloud consumers.**

StackGuardian's Cloud Orchestration Platform reduces wait times to get your cloud infrastructure deployed from weeks to hours. And by the way, all aligned with what is important for you in terms of cost, security and regulation. Difficult to believe we know...

# One Cloud Operation Platform bringing together the Agility and Compliance the Business needs.

A platform connecting people, process & technology in the cloud.

StackGuardian's Cloud Orchestration Platform makes enterprises adhere to compliant cloud orchestration practices driving consistent results by interfacing cloud users with right processes when using public clouds.

- ✔ **One interface** for No-Code cloud orchestration
- ✔ **One framework** to enforce cloud policies
- ✔ **One platform** for multi-cloud compliance

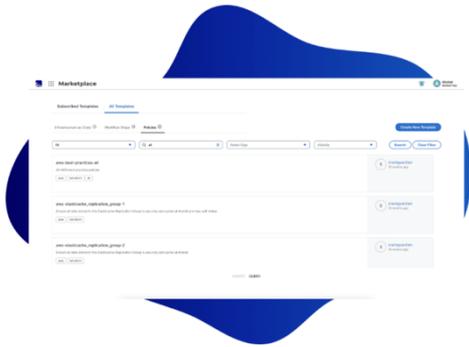

# StackGuardian

## Define and enforce proactive compliance.

Tirth (StackGuardian Policy Framework) enables CloudOps & Security teams to define compliance proactively.

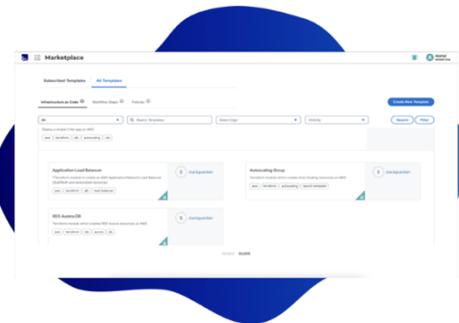

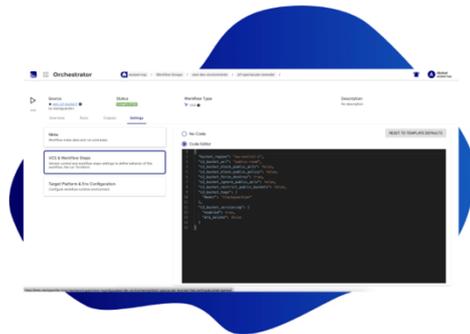

- ✔ No-Code interface to define policies
- ✔ Enforce cloud best practices out of the box
- ✔ Complex custom policies to suit your specific needs

## Empower both experts and consumers to build and deploy.

Using No-Code interface unlock any cloud consumer to build cloud environments quicker than ever before.

- ✔ Offload workload from experts by enabling self-service
- ✔ Reduce security workload and noncompliance
- ✔ Switch to Code, anytime

## Reuse what got been done before.

Reference infrastructure library on StackGuardian Marketplace

- ✔ Private cloud architecture library
- ✔ Use and contribute community provided templates
- ✔ Integrate with GitHub and manage templates' lifecycle

www.linkedin.com/company/stackguardian/

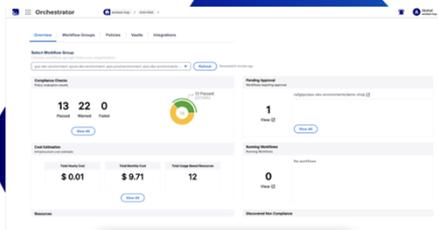

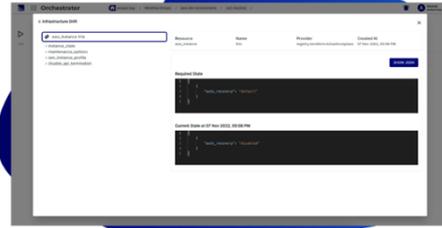

# StackGuardian

## Detect drift maintaining compliance.

StackGuardian's continuous compliance ensures constant visibility into your cloud compliance posture.

- ✔ Discover cost and security misconfigurations in the cloud
- ✔ Convert misconfigurations into fixes
- ✔ Detect and remediate infrastructure drifts

## Reporting & Analytics.

Single pane of glass for infrastructure orchestration and compliance

- ✔ Single of glass into all cloud infrastructure
- ✔ Cost & security compliance reporting
- ✔ Streamline security audits

## Integrations

### Public Cloud Providers

Create compliant infrastructure into anycloud with increased agility.

### CI/CD Tools

Connect into any third-party CI/CD tools to automate your workflows.

### Policy Engines

Stop Non-Compliance using [Tirth](#) (SG Policy Framework) or Open Policy Agent.

### Terraform

Effectively collaborate on Terraform workload using No-Code interface.

### GitHub

Integrate into GitHub or other Git based version control systems.

### Notify & Collaborate

Keep up-to-date with notification over email or Slack.
