

# Financial Analysis & Management System

Stantec.io

**A SUBSCRIPTION, CLOUD- BASED, MOBILE APPLICATION THAT HELPS YOU QUICKLY AND EASILY MODEL FINANCIAL SCENARIOS**

**Putting your financial data at your fingertips—anytime, anywhere**

The Stantec.io Financial Analysis & Management System (FAMS) is a subscription-based online financial planning application designed to support government entities with real-time, intelligent financial modeling.

These unprecedented times require real-time understanding of the impacts of changing conditions and the ability to quickly evaluate options in order to take decisive actions in a climate of uncertainty. FAMS is an intelligent, easy-to-use financial modeling tool as dynamic as the times we face.

**A single source of truth**

As a cloud-based application, you can access FAMS on any device, simultaneously with others at your organization, without any concerns about improper inputs, errors, or version control. FAMS allows for scenario sharing between multiple users and alerts you about data updates. You can also easily integrate and manage your data from a variety of sources, all in the FAMS platform.

**Make intelligent financial decisions, efficiently**

FAMS makes it easy to optimize decision-making with quick toggling between various combinations of inputs and assumptions that you define.

FAMS makes scenario management easy with the ability to create, compare, and share multiple scenarios side by side in real time. FAMS also allows you to input key data and assumptions to quickly develop and evaluate new scenarios. You can store these inputs and scenarios for ease of future use to facilitate more fluid meetings and efficient discussions around your key issues and decision alternatives.

***Comparing scenarios created so easily in FAMS saved a significant amount of time and helped us make decisions in a timely manner."***

### **You're in control**

With FAMS, you have 24/7 access to powerful financial modeling in an easy-to-use web-based interface that allows ultimate flexibility and control in performing multiple high-level sensitivity analyses and scenario management activities.

FAMS is a dynamic financial forecasting system designed to give real-time answers to tough questions based on your most current data and conditions, including

sustainability of the "status quo," identifying revenue targets to satisfy projected costs for a defined level of service, determining required revenue streams to support operational and capital spending budgets, and communicating the impacts of strategic initiatives to your key performance measures.

### **You've got FAMS. We've got your back.**

FAMS is backed by hundreds of years of technical expertise and proven through the successful implementation of thousands of recommended financial plans. The power of that knowledge, experience, and lessons learned is available through technical support and as-needed consulting services that are provided by Stantec industry experts.

### **Which FAMS is right for you?**

For small to mid-size municipalities or those looking to be up and running in just a few short hours using high-level data, FAMS features a self-guided set-up and requires little to no customization. For larger entities or those looking to take a closer look at things, FAMS Pro offers a high degree of customization to deal with complex and unique situations, allowing for additional key performance indicators, supplemental calculations and analysis, expanded level of detail, and more robust functionality.

Whichever option you choose, the result is the same—intelligent, real-time financial modeling you can rely on.
