

This is Statt — the first company to automate public policy and regulatory intelligence

Statt is a team of policy wonks, software developers, and machine learning engineers who have built the world's first public policy and regulatory analytics and intelligence platform.

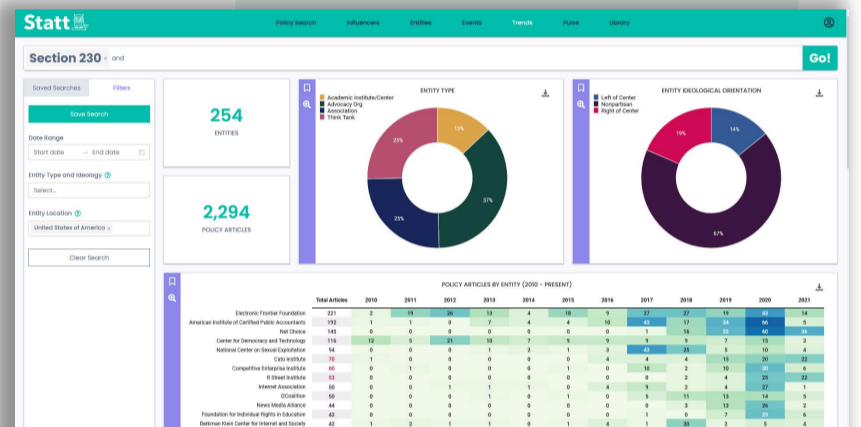

The Problem

Global corporations, government affairs, communications and law firms, and industry associations largely evaluate emerging policy and regulatory risks through decades old solutions. Information is now coming from 15,000+ organizations, so it is impossible to stay informed and ahead of these risks.

Statt's Solution

Statt has created a Gen AI-powered research and analytics platform from a unique dataset curated for this market to identify emerging policy risks and opportunities gaining momentum and the key stakeholders influencing the policymaking and regulatory process. We enable you to access our prescriptive analytics at your fingertips, informed by the most relevant thinking from policy organizations, as well updated regulatory and legislation developments in Washington.

Datasets

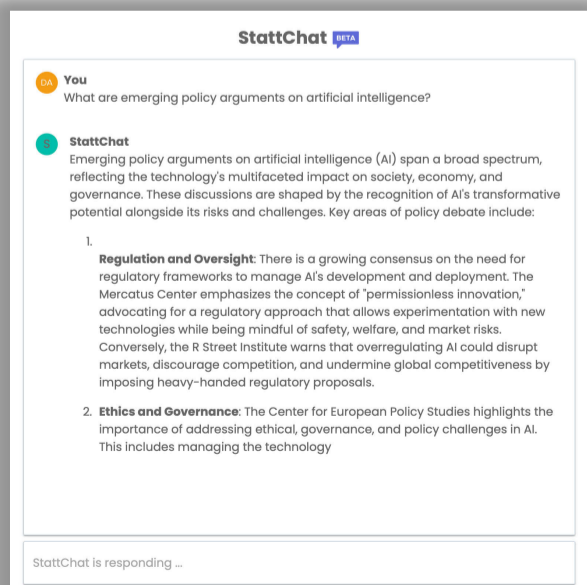

- 5,000+ think tanks
- 3,500+ academic centers/institutes
- 4,000+ advocacy organizations
- 2,500+ trade associations

Coming in Q2!

Introducing StattChat!

A Gen AI-powered chatbot that allows you to ask questions and get answers about any public policy issue

- Answers are generated from training on our unique datasets
- Datasets are updated in real-time, so answers are timely
- Ask specific or broad questions and get relevant answers that are right for your needs, along with underlying source docs
- Export metadata to CSV or generated automated reports that can be shared with internal and external stakeholders
