

Data Shipper

Seamless Data Transfers for Dynamics 365 CE

Brochure

Overview

Data Shipper is an intuitive tool designed to streamline data migration and synchronization between Dynamics 365 CE environments. It empowers users to transfer data easily and reliably, all within the Dynamics 365 CE interface—no third-party tools required.

Intended Use

Data Shipper is optimized for smaller data collections, making it perfect for transferring specific data sets initially set up in a development environment to test, acceptance, or production environments. It is not intended for large-scale data migrations, so customers seeking solutions for massive data transfers may require other tools.

Who Benefits

Data Shipper is ideal for:

- Super users and system administrators in small to mid-sized organizations.
- Users with varying levels of technical expertise who need a straightforward, reliable data transfer solution.

Key Features and Benefits

- **Direct Integration:** Transfer data seamlessly from a source environment to a target environment without leaving the Dynamics 365 CE interface.
- **User-Friendly Design:** Built for users with less technical knowledge, Data Shipper simplifies the data transfer process, reducing reliance on IT resources.
- **Reusable Setups:** Store and reuse previous transfer configurations, allowing for faster, more efficient data migrations in the future.
- **Enhanced Efficiency:** Eliminate time-consuming manual transfers and reduce the risk of errors or discrepancies.

Addressing Customer Needs

Data Shipper addresses a common pain point for Dynamics 365 CE users: the complexity and effort required for data migrations. By providing an easy-to-use, in-house solution, Data Shipper saves time and simplifies the process, enabling organizations to manage data transfers quickly and confidently.
