Network is down?
Fail over to our data center.

Storage Guardian's **Fast Failover** service makes it easy and affordable to replicate your applications and data to our data center, and to call or text our hotline to initiate a recovery. Our automated failover system can perform the full recovery workflow on its own, saving critical time.

Key Features and Benefits

- Drastically reduced recovery time
- Works with many backup systems
- Your staff are automatically sent VPNs to the recovered servers
- Easy to "fail back" to your own servers later

How it Works

Back up your applications and data using Storage Guardian – or any other hypervisor-ready platform. If disaster ever strikes, it's easy to recover your data onto standby machines in our data center.

In a disaster, simply call or text our Fast Failover hotline and enter a secret PIN that we arrange with you in advance.

Our automated service recovers your apps and data onto secure servers in our data center.

The Fast Failover system then sends your staff VPN links to access these servers until your own network is back online.

Why Fast Failover?

Imagine that your network is flooded or destroyed. You need to quickly recover your apps and data onto new hardware, and give your staff an easy way to connect to them. An engineer would need to spend a long time configuring the servers, restoring the applications and data, and distributing VPN connections to your employees. With Fast Failover, the whole recovery workflow is automated, fast and efficient.

Key Benefits

Fully automated

Traditional data recovery often takes several steps and requires the involvement of an engineer. Fast Failover requires no network engineering expertise.

Platform agnostic

Any company or MSP that uses a hypervisor-based backup sets can use our Fast Failover service, regardless of the backup software that they use.

Secure and compliant

If you use Storage Guardian for the backup, your data is stored in our SAS 70 Type II data center and meets industry regulations such as HIPAA, SSAE 16 SOC 2 and FIPS and CICA 5790.

Affordable

Our economies of scale enable us to provide prices that are similar to those of conventional cloud hosting platforms such as AWS. Contact us for a quote.

Recover yourself

Initiate a recovery on your own, 24/7/365, with no necessary input or support from an engineer. Just call our Fast Failover service and follow the prompts.

Phone-based recovery

If the internet is down in a disaster, you can use your regular phone (landline or cell) to initiate a recovery.

Free VPNs

In a disaster, you and your staff are emailed virtual private network links along with instructions on how to connect.

Easy fail-back

Once the disaster is over and your in-house systems are back online, our established processes are in place to make it easy to migrate back to them.
