# Agentic Workflow Engine

AI Workflow Accelerator

Build an Agentic AI Workflow Agent in 5 Days

The Problem
Workflow challenges

Your Organisation

Manual Processes
Heavy reliance on manual processes for information management and workflow coordination

Data Silos
Hard to leverage information across the organisation's distributed teams

Lack of Automation
Administrative processes (e.g., FoI requests, validation, classification etc,.) lack automation
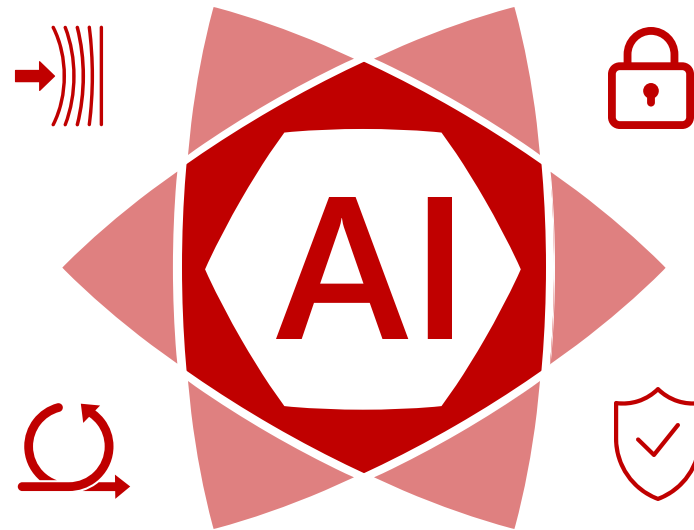

The Problem
Getting AI Powered Workflow Agents Trusted and Adopted

Getting beyond a POC

A Proof of Concept is useful to show the possibilities but it's not architected for production

Governance & security

Lack of data management platforms, nascent standards on exposing sensitive data to models, and the need for zero trust architecture

Adaptability & re-use

How to stay agile, adopt latest models, avoid lock in and make use of repeatable patterns and templates

Bias, ethics & trust

Exposing organisation to legal or PR risks around adoption and the need for robust AI frameworks to manage risks

AI Workflow Accelerator
Build an Agentic Workflow in 5 Days

The Opportunity
Getting more done. People + AI Powered Workflow Agents

£45b
Annual Savings
Can be saved annually by automating routine tasks. Equivalent to 4 to 7% of total UK public sector budget

15%
Daily Decisions
Of daily decisions will be handled by AI agents autonomously by 2028

AI

47%
Paper & Phone
Of all government services still rely on paper processes and phone calls

33%
Autonomous Agents
Of all AI in the enterprise will be via autonomous workflow agents by 2028

AI Workflow Accelerator
Build an Agentic AI Workflow Agent in 5 Days

1

Overview

Unlock the power of AI in your business with the Agentic Workflow Engine from Storm ID. This 5-day accelerator helps organisations rapidly design, build and demonstrate AI agents tailored to their workflow needs.

By integrating AI agents with internal systems, data sources and knowledge repositories, our platform securely automates administrative workflows, driving efficiency and productivity. This engagement will showcase the potential of AI agents for your organisation through hands-on collaboration with our AI consultants and engineers.

2

Key Benefits

- Identify and prioritise high-value AI agent use cases for your organisation
- Rapidly develop a custom AI workflow using our pre-built component library
- Gain hands-on experience with AI workflow automation alongside our experts
- Receive a personalised video demonstration of your AI workflow for stakeholder engagement
- Obtain actionable recommendations for scaling AI agent use across your organisation

3

What's Included?

- **Use Case Identification Workshop**
  Collaborate with our team to define objectives, explore automation opportunities and prioritise use cases
- **AI Workflow Development**
  Our experts will build and refine your AI workflow using real or realistic synthetic data in a secure Azure environment
- **Demonstration & Recommendations**
  Showcase your AI workflow to stakeholders and receive a short report with strategic next steps for scaling AI adoption

The Process

Build an Agentic AI Workflow Agent in 5 Days

1

Day 1

Use Case Definition Workshop
Identify business challenges, explore automation opportunities, and select components for your AI workflow.
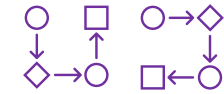

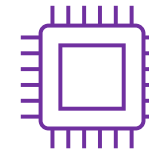

2

Days 2-4

Workflow Development
Our AI consultants and engineers build and refine the AI workflow using your sample data or securely generated synthetic data.

3

Day 5

Demo & Recommendations
Present your AI workflow to key stakeholders and receive tailored recommendations for scaling AI implementation.

Deliverables
- Custom Video Demonstration – A recorded walkthrough of your AI workflow in action.
- Strategic Recommendations Report – Guidance on scaling your workflow and identifying further AI opportunities.
