

Storm AI Components

Build custom AI in 5 days

The problem

Workflow challenges

Your organisation

Manual processes

Heavy reliance on manual processes for information management and workflow coordination

Data silos

Hard to leverage information across the organisation's distributed teams

Lack of automation

Administrative processes (e.g., Fol requests, validation, classification etc.) lack automation

The problem

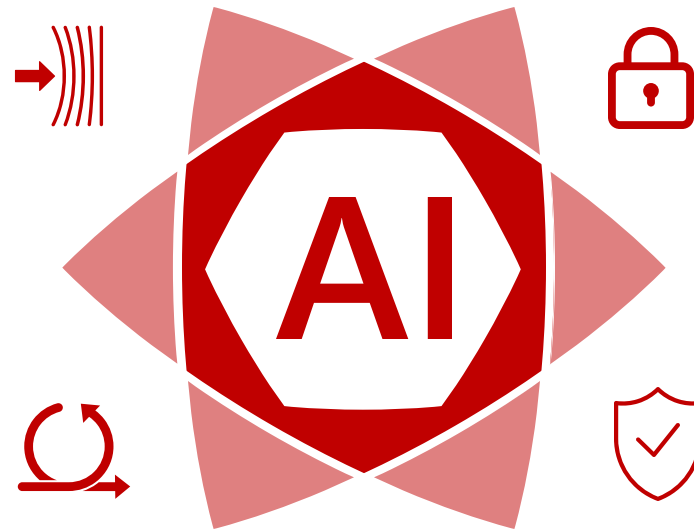

Getting custom AI trusted and adopted

Getting beyond a POC

A Proof of Concept is useful to show the possibilities but it's not architected for production

Adaptability & re-use

How to stay agile, adopt latest models, avoid lock in and make use of repeatable patterns and templates

Governance & security

Lack of data management platforms, nascent standards on exposing sensitive data to models, and the need for zero trust architecture

Bias, ethics & trust

Exposing organisation to legal or PR risks around adoption and the need for robust AI frameworks to manage risks

The opportunity

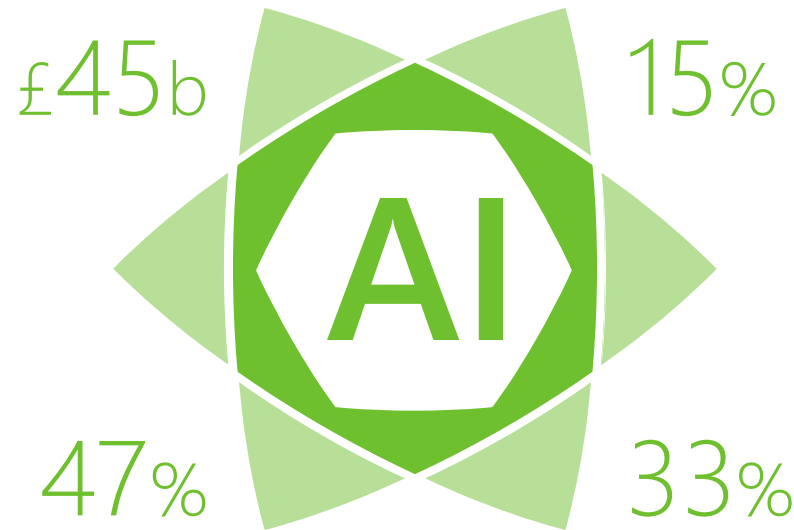

Getting more done. People + custom AI

Annual savings

Can be saved annually by automating routine tasks. Equivalent to 4 to 7% of total UK public sector budget

Paper & phone

Of all government services still rely on paper processes and phone calls

Daily decisions

Of daily decisions will be handled by AI agents autonomously by 2028

Autonomous agents

Of all AI in the enterprise will be via autonomous workflow agents by 2028

Storm AI Components

Build custom AI in 5 days

1

Overview

Our suite of production-ready components reduces risk, time and cost by providing proven building blocks for AI solution development. Instead of starting from scratch, we help you compose and orchestrate AI capabilities – from classification and routing to document intelligence and policy checks – into secure, enterprise-grade workflows that deliver value fast.

2

Key benefits

- Identify and prioritise high-value AI use cases for your organisation
- Rapidly develop a custom AI workflow using our production-ready component library
- Gain hands-on experience with AI solution design alongside our experts
- Receive a personalised video demonstration of your AI workflow for stakeholder engagement
- Obtain actionable recommendations for scaling AI adoption across your organisation

3

What's included?

- **Use case identification workshop**
Define objectives, explore automation opportunities and prioritise use cases
- **AI workflow development**
Build and refine your AI solution using real or realistic synthetic data in a secure Azure environment
- **Demonstration & recommendations**
Showcase your AI solution to stakeholders and receive a short report with strategic next steps for scaling AI adoption

The process

Build custom AI in 5 days

1

Day 1

Use case identification workshop

Define objectives, explore automation opportunities and prioritise use cases

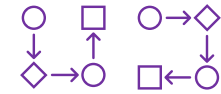

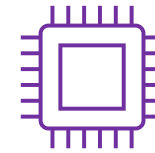

2

Days 2-4

AI workflow development

Build and refine your AI solution using real or realistic synthetic data in a secure Azure environment

3

Day 5

Demo & recommendations

Showcase your AI solution to stakeholders and receive a short report with strategic next steps for scaling AI adoption

Deliverables

- Custom video demonstration – A recorded walkthrough of your AI solution in action
- Strategic recommendations report – Guidance on scaling AI adoption and identifying further AI opportunities
