Building intelligent factories

With the Azure-based Intelligent Factory Solution Offering from Stratus Innovations Group, manufacturers can achieve a fully integrated IoT ecosystem that generates deep insights, enabling them to maximize quality, efficiency and output; predict device issues and perform preventive maintenance; and proactively manage machine loss and replacement. As an added benefit, ODMs can easily create new revenue streams for their organizations by providing additional insights and services to customers who purchase their devices.

stratus
innovations group

The Intelligent Factory Solution Offering from Stratus Innovations Group provides manufacturers with a tremendous number of software assets that they can use to quickly implement enterprise-class IoT solutions.

Easily connect existing legacy equipment to the IoT network and take advantage of the telemetry data they generate.

Outpace the competition

Predictive maintenance; connected field service

Additional functionality takes solutions far beyond simply monitoring the current health of devices

Reduced costs & less risk

Uses pre-built components to significantly reduce the cost of solutions and the risk of implementation

Rapid time to market & time to value

Dramatically reduces the time required for IoT solution development and deployment

High visibility and deep insights

❚❚ Our field techs are absolutely amazed at the visibility we can now provide on the health and welfare of our laser devices."

— **COO,** Global Device Manufacturer

Real-time data and analytics

❚❚ We were impressed with how quickly we could take our existing customer devices and connect them to the Azure IoT Hub to gain real-time device telemetry data."

— **Lead Architect,** Global Device Manufacturer, KHS

About Stratus Innovations Group

We are a technology solutions organization that focuses solely on innovative cloud-based IT solutions. As former Directors of Microsoft's Enterprise Services business, we founded Stratus Innovations Group with the mission of providing cloud-based IT solutions that will deliver significant and immediate business value and return on investment to organizations that implement cloud services for their basic IT infrastructure and internal application portfolio.
