

Learning Studio

Learning Studio AI-Powered Corporate Learning That
Changes Behavior — Not Just Completion Rates

Learn anything. Master it fast.

The studio turns any Microsoft topic into a tailored learning experience — build a full course from official docs, get instant guidance for a real task, or watch a cinematic 3-minute briefing with AI voice narration. Three ways to learn, one engine.

Build my Course

Help me get it done

Teach me in 3 minutes

Unlock any skill. Transform any knowledge into a structured course.

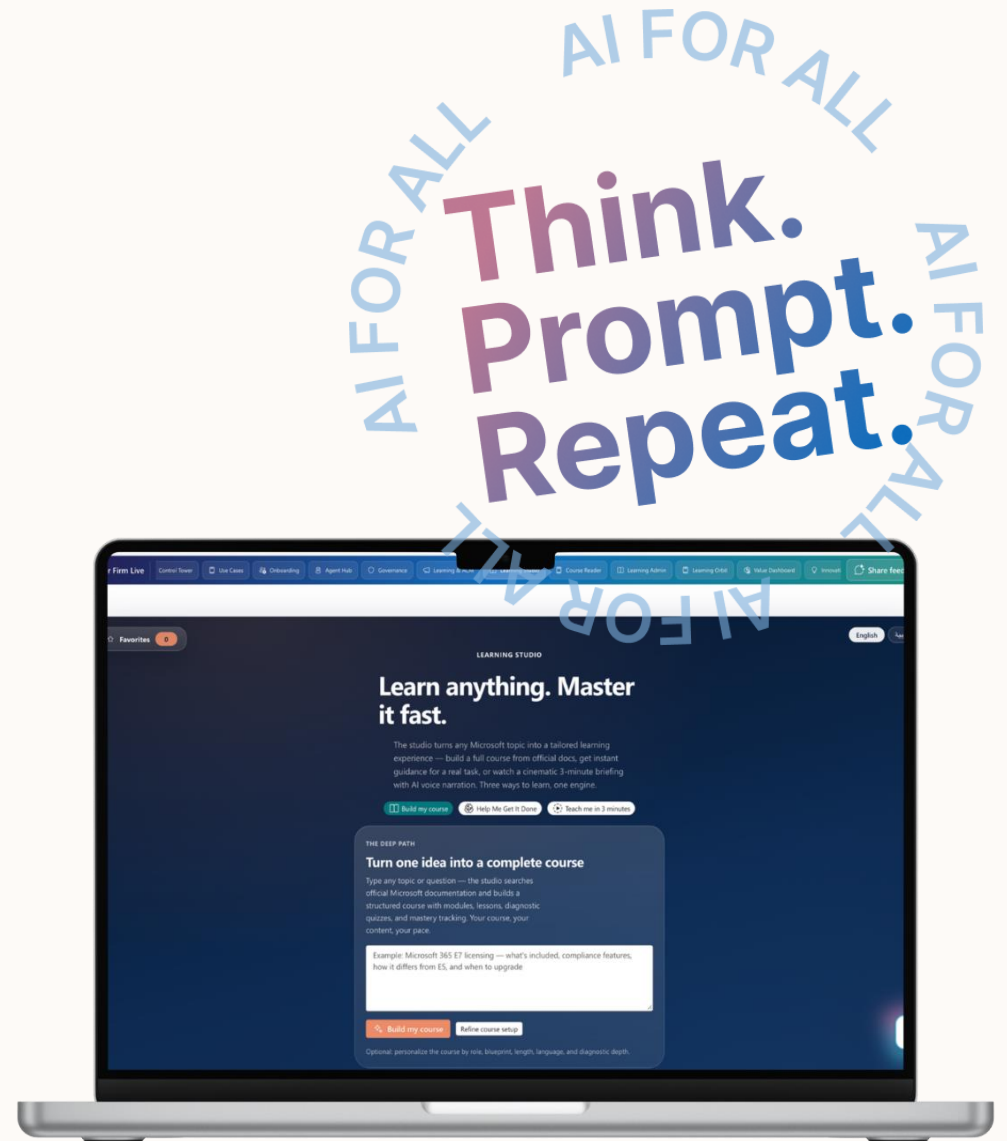

**Corporate Training Is a \$Trillion Industry With
<10% Success Rate**

Sulava MEA Learning Studio

From Broken Training to Proven Mastery — in Four Steps

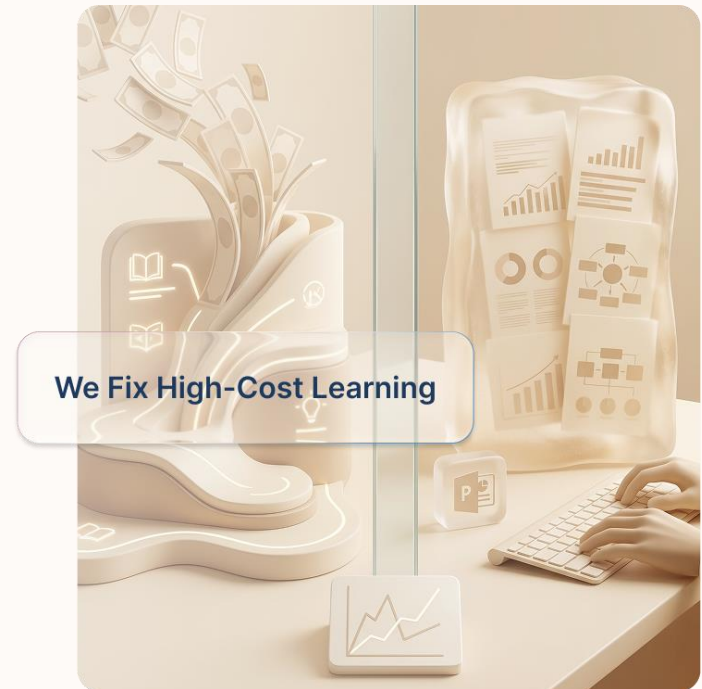

- The problem: Corporate learning is expensive and almost entirely ineffective
- The fix: An AI learning engine that lives inside Microsoft 365 and teaches people what they actually need, when they need it
- MEA-native: Built for Middle East/Africa enterprises from day one native Arabic and English voice avatars, not bolt-on translations
- Accountability: A mastery model that measures real skill development — Readiness, Momentum, Proof, Exposure, Drift — not hours logged

The cost of corporate learning is enormous — and *barely works*

The Cost of Corporate Learning Is Enormous — and Barely Works

- Enterprises spend thousands per employee per year on learning platforms
- Completion rates stay below 20%
- Less than 10% of corporate training translates to on-the-job behavior change
- Root cause: generic content + no follow-through = theater
- You're not under-investing in learning. You're investing in the wrong model.

**This is how fast
your organization *can learn***

Learning Studio

Unlock any skill. Transform any knowledge into a structured course.

Introducing Learning Studio — the AI that *knows your work*

English

العربية

- Not a course catalog. A personal learning engine that lives inside your employees' Microsoft 365 environment
- Learns from real work context: Analyzes each person's Copilot prompts, meetings, and role to recommend what matters most — this week
- Measures behavior change: After teaching a skill, Learning Studio tracks whether the employee's on-the-job behavior actually changed
- Enterprise-grade foundation: Built on Entra ID, Microsoft 365 Copilot Graph APIs, and Azure AI Foundry (now Microsoft Foundry)

AI tools. Each one fights a different learning *failure mode*.

9+ AI Tools — Each One Fights a Different Learning Failure Mode

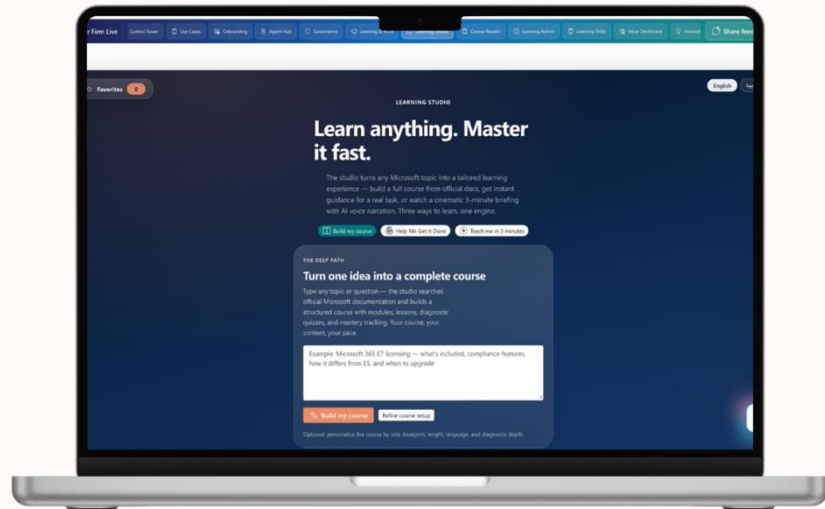

- Included tools: Ghost Reader · Change Lens · Challenge Me · Teach-Back · Flashcards · ELI5 · Study Guide · Cheat Sheet — and more
- Same content, many modes: All tools draw from the same content base. Learners switch modes in one click to match their preferred learning style
- Different tools tackle different failures: Comprehension gaps, retention loss, inability to apply knowledge, passive reading — each has a dedicated tool¹⁵.
- Shipping today. Powered by Claude Opus 4.7 and Azure OpenAI¹⁶.

Your organization is full of knowledge. It's just not *usable*.

- Policies, process docs, and tribal expertise sit scattered across SharePoint, email, and people's heads.
- Learning Studio turns scattered information into a structured, teachable lesson in approximately 3 minutes
- The result: dormant organizational knowledge becomes on-demand capability.

Teach Me in 3 Minutes. Help Me Get It *Done*.

Two moments no other platform owns

1. Teach Me in 3 Minutes: type any topic → full one-page lesson instantly.

2. Help Me Get It Done: paste your actual task + screenshots. AI returns the exact lesson + worked example + practice prompt grounded in your work.

Proof: Both shipped; used daily by Sulava consultants. No catalog browsing, no course enrollment, no waiting

“Everyone asks AI for help with a task. We turn that question into *a learning moment*.”

Every time an employee asks AI for a quick answer, Learning Studio converts that moment into lasting skill development. Your team learns by doing their real work better, today.

Voice Avatars in Native *Arabic and English*

- **Azure Voice Live avatars** conduct lessons, interviews, and co-study sessions in Arabic or English with natural pacing
- **Not machine-translated** — Arabic delivery is native from day one built for MEA enterprises where bilingual fluency is a hard requirement
- **Localization is a first-class feature**, not an afterthought

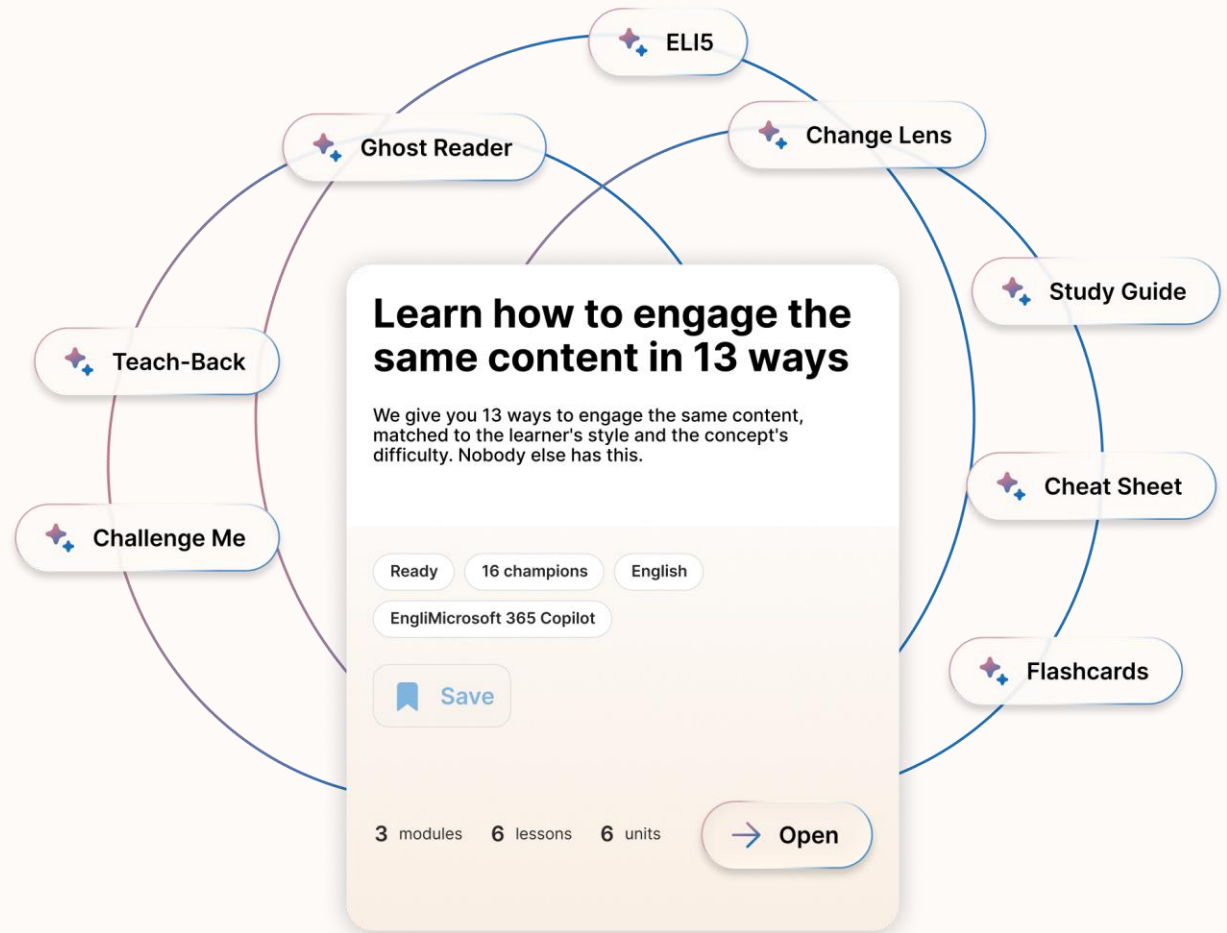

Learning Orbit — prove mastery, not attendance

- **Five measured signals:** Readiness · Momentum · Proof · Exposure · Drift. Every learner's position is measured, not assumed.
- **Four progression bands:** Emerging → Operational → Trusted → Catalyst. Clear, transparent skill ladder.
- **Verifiable proof marks** that earn Microsoft Viva Skills credentials. Managers see certified readiness, not hours logged.
- **Operational Mastery Framework codified and architected** for Viva Skills integration. Plugs into your existing HR and skills ecosystem from day one

Teach and learn anything just in *3 minutes*, in different ways

- AI-generated micro-learning lets employees learn any subject in minutes via text, voice, Q&A, flashcards, or challenge modes
- Anyone can create training. Front-line experts turn their knowledge into structured content instantly — no L&D bottleneck
- That is how you scale capability across an entire organization
