

Cybersecurity Assessment

A practical service that helps your organization understand its current security posture, identify gaps, and define the next steps to reduce cyber risk.

Why this service matters

Clear view of your current maturity

We assess your environment against CIS Critical Security Controls v8 to show where your cybersecurity stands today and where improvement is needed.

Better understanding of data exposure

We identify sensitive information in Microsoft 365 and highlight user activities that may present data protection risk.

Visibility into vulnerabilities and misconfigurations

Using Microsoft Defender Vulnerability Management, we help uncover, prioritize, and understand security weaknesses across Windows endpoints and servers.

Cloud app usage insights (optional)

With Microsoft Defender for Cloud Apps, we can analyze cloud application usage and help you detect or limit risky applications.

Key business benefits

- Understand your current cyber maturity level.
- Identify high-priority security gaps faster.
- Gain practical recommendations tailored to your environment.
- Improve data protection and reduce operational risk.
- Build a stronger roadmap for future Microsoft security investments.

Why Supremo

- Supremo is a Microsoft-focused partner delivering Security and Modern Work solutions.
- Our certified technical experts combine platform knowledge with practical implementation experience across multiple industries.
- The outcome is not only an assessment report, but also a clear, business-oriented action plan for improving resilience, protecting data, and reducing exposure to cyber threats.

What is included

- Review of completed assessment questionnaires.
- Optional deployment of trial Microsoft 365 Threat Protection Engagement licenses, where required.
- Configuration of Microsoft security products used during the engagement.
- Technical troubleshooting during setup.
- Vulnerability scanning and assessment for at least 50 Windows 10/11 devices or Windows servers.
- Discovery and prioritization of vulnerabilities and configuration issues.
- Review of sensitive information in Microsoft 365 using Microsoft Purview capabilities.
- Optional cloud app analysis through Cloud Discovery in Microsoft Defender for Cloud Apps.
- Final recommendations document with improvement guidance and next steps.

Delivery process

1. Introductory call
2. Technical workshop
3. Customer environment configuration
4. Data collection
5. Analysis of findings
6. Results presentation and recommendations

Typical duration: 3 to 4 weeks.

Delivery model: Supremo engineers perform the technical work after the required access is granted, minimizing the client team's workload.

Funding note: according to the source brochure, the assessment may be fully funded by Microsoft subject to eligibility.

Let's assess your security posture.
