

Microsoft Cloud Security Penetration testing

How secure & compliant is your Microsoft 365 and Azure environment. Is your environment setup & configured securely and safe against hackers?

Our team of certified and Microsoft-acknowledged ethical hackers simulate real-world cyberattacks to identify possible weaknesses, misconfigurations and vulnerabilities in your infrastructure, applications, and networks. We deliver detailed reports with actionable recommendations, helping you prioritize and remediate risks, enhance overall security, and stay ahead of evolving threats.

Identify risks

Clarity in your environment, identify potential weaknesses, misconfigurations & vulnerabilities throughout your Microsoft, application and infrastructure environment and prevent potential hacker exploits.

Reduce exposure

Mitigate IT Risk & vulnerability exposure by implementing remediation advise of BDO's ethical hackers. Ensuring the right controls are in place and work properly

Demonstrate resilience & compliance

Stay resilient against the latest threats and techniques used by hackers attacking organizations. Demonstrate control & compliance through independent BDO reports.
